Table of Contents

Vision ................................................. 5
Preface ............................................... 6
Acknowledgement .................................... 14

Part 1 Background Information
1.1 The New Senior Secondary (NSS) Academic Structure and Curriculum -- Other Learning Experiences (OLE) ........................................ 16
1.2 The Elder Academy .................................. 17
1.3 Purpose of this Handbook .......................... 17
1.4 Structure of this Handbook ....................... 17

Part 2 Analysis of Other Learning Experiences and Structure of Elder Academy
2.1 Other Learning Experiences
2.1.1 Structure and Theoretical Basis ................ 19
2.1.2 Implementation ................................ 19
2.1.3 Assessment .................................... 20
2.2 Elder Academy
2.2.1 Vision ........................................ 20
2.2.2 Mission ....................................... 20
2.2.3 Structure ...................................... 21
2.2.4 Implementation ................................. 21

Part 3 Cooperation among Other Learning Experiences, Elder Academy and School Syllabus
3.1 Learning Theories of Other Learning Experiences and Elder Academy ......................... 22
3.2 Structure and Future Development of the Collaboration of Other Learning Experiences and Elder Academy
3.2.1 Structure ...................................... 23
3.2.2 Modes of Operation ............................ 24

Part 4 Preparation, Implementation and Assessment of the collaboration of Other Learning Experiences, Elder Academy and School Syllabus
4.1 Implementation of the Scheme
4.1.1 Cooperation among Organizations ............ 26
4.1.2 Relationships between Partnering Organizations ........................................... 26
4.2 Process of the Scheme
4.2.1 Preparation .................................... 27
4.2.2 Implementation ................................. 28
4.2.3 Final Stage .................................... 29
4.3 Responsibilities and Tasks of Stakeholders
4.3.1 Schools ........................................ 32
4.3.2 Social Service Organizations ................. 35
4.4 Benefits of the Stakeholders
4.4.1 Students ...................................... 36
4.4.2 The Elderly .................................... 36
4.4.3 Teachers ...................................... 36
4.4.4 Staff of Social Service Organizations ....... 36
4.4.5 Visiting Venue ................................ 36

Part 5 Integration of Other Learning Experiences and Elder Academy: Assessment
5.1 Assessment Structure................................ 37
5.1.1 Knowledge ..................................... 37
5.1.2 Attitudes/Behaviors/Skills ...................... 37
5.1.3 Values .......................................... 37
5.1.4 Effectiveness of the Scheme/Learning Outcomes ........................................... 38
5.2 Assessment Methods
5.2.1 Quantitative Assessment ....................... 38
5.2.2 Qualitative Assessment ........................ 42
5.3 Analysis and Suggestions of Assessment Results .................................................. 42

Part 6 Teaching Modes
6.1 Mode 1: Solely Social Services
6.1.1 Example 1: Lingnan Hang Yee Memorial Secondary School ........................... 44
6.1.2 Example 2: Yan Chai Hospital No.2 Secondary School ..................................... 45
6.2 Mode 2: Form-Based Integrated Project Learning
6.2.1 Example 1: Stewards Ma Kam Ming Charitable Foundation Ma Ko Pan Memorial College .................................................. 46
6.2.2 Example 2: Yan Chai Hospital No.2 Secondary School ..................................... 51
6.3 Mode 3: Cross-Grade Integrated Project Learning
6.3.1 Example 1: Lingnan Dr. Chung Wing Kwong Memorial Secondary School Elder Academy: Model, Structure and Experiences .................................................. 52
6.3.2 Example 2: Stewards Ma Kam Ming Charitable Foundation Ma Ko Pan Memorial College: Service-Learning Project in Elder Academy .................................................. 56

Part 7 Points to Note
7.1 The Characteristics of Elder Academy ........... 62
7.2 Communication with Partnering Organizations .................................................. 62
7.3 Students’ Participation ............................. 62
7.4 Human Resources ................................. 62
With increased life expectancy, Hong Kong’s population structure has been changing. Intergenerational harmony is an important aspect to develop as suggested by the United Nations. A school should no longer be just a platform for students to learn professional skills and knowledge; instead, it should also cultivate youngsters’ morality and values through cross-sectional, professional and generational education modes.

Young people are pillars of our future society. Providing quality education is therefore important. Youngsters are easily affected by different environments and ages. A special platform for facilitating learning, implemented by experienced elders, teachers and school principals, should be provided to youngsters. The elderly actively contributed to society in their early years and possess precious life and work experiences. We believe that elders would be able to lead a contributive and fruitful life if their experiences could be made good use of. “Elder Academy at Lingnan” does not only provide elders with learning opportunities, but it also promotes intergenerational harmony and respect towards elders in society.

The New Senior Secondary (NSS) academic structure and curriculum have just been put into implementation in 2009, which implies a great change for both secondary schools and universities. In NSS, students need to complete Other Learning Experiences (OLE) as well as study their chosen electives. OLE enables students to move away from the traditional unilateral learning and enhance their learning and subject knowledge through experiencing and practicing.

In view of that, Lingnan University does not only work in conjunction with the NSS, but also as an insightful leader in education. Office of Service-Learning and Asia-Pacific Institute of Ageing Studies of Lingnan University encourage undergraduates to serve the community using their knowledge. This could be considered as part of OLE in university education. Through community services, students reflect, learn and apply their subject knowledge. They give classes to the elderly in Elder Academy; both the instructors and the learners grow and positive life values are built.

Integrating Elder Academy into OLE provides secondary school teachers with more choices and, at the same time, reduces their administrative work in contacting partners for the experiential learning opportunities for students. Lingnan University wishes that this handbook can be used as a reference by secondary schools when putting OLE into practice, and hence providing students with a more comprehensive learning environment for personal and academic development, and helping them, our future leaders, lay a firm academic foundation.

We would like to take the opportunity to thank the Labour and Welfare Bureau, Elderly Commission, Social Welfare Department, Lingnan Education Organization, as well as various social welfare organizations and schools for their contribution to this handbook, so that these experiences and achievements could be shared.

Office of Service-Learning, Lingnan University
Asia-Pacific Institute of Ageing Studies, Lingnan University
To meet with the challenges brought about by the ageing population, the Chief Executive of the HKSAR set “Care for the Elderly” as one of the Strategic Policy Objectives in 1997. In the same year, the Elderly Commission was established, as an advisory body to the government regarding elderly-related policies.

In order to promote lifelong learning and “active ageing” among the elderly and encourage them to live a fruitful and cheerful life, the Commission worked with the government and introduced the Elder Academy Scheme. This is a school-based and cross-sectoral scheme that promotes lifelong learning and intergenerational harmony in the society. By November of 2009, there were over 100 elder academies in Hong Kong, participated by primary, secondary schools and tertiary institutions. We encourage the elderly to continue learning, keep up with the times, and contribute to the society through active social participation.

In 2008, with the support of the Labour and Welfare Bureau and Elderly Commission, the Office of Service-Learning, Asia-Pacific Institute of Ageing Studies of Lingnan University and 4 Lingnan sister schools (including primary and secondary) launched the “Elder Academy at Lingnan” (LUEA), which aims at providing elders with different levels of learning opportunities. LUEA enables elders to learn something new, to meet more friends, and hence lead a healthier lifestyle with a sense of well being and worthiness. Meanwhile, I also believe that the student volunteers would be inspired by different elders’ life experiences and developed a greater sense of citizenship and social awareness.

Promoting the Elder Academy Scheme was a joyful and satisfying process with support from the government and various parties. An intergenerational learning platform was also built and seniors were able to continue acquiring new knowledge and live a colourful life.

I am glad to know that the Scheme not only promotes intergenerational harmony, but also satisfies the requirements of Other Learning Experiences set by the Education Bureau. I wish that more schools would join this scheme, using Elder Academy as a platform to let students have a taste of social services, and to facilitate mutual understanding and nurture the friendship between the elderly and students.

I would like to thank Lingnan Education Organization for the support and contribution to the Elder Academy Scheme; and Lingnan University for bridging various units and consolidating the experiences of the schools into this handbook. Their generous support and work in promoting intergenerational harmony and positive values is highly appreciated.

I believe this handbook will be a useful reference for schools. By encouraging more schools to participate in the Elder Academy scheme, I hope that continuous learning and social harmony could be further nurtured.

Dr. LEONG Che Hung
Chairman, Elderly Commission

Lingnanians have started to establish primary and secondary schools in Hong Kong since 1922. As Lingnan University in Guangzhou was suspended in 1952, some devoted friends of the school established the Lingnan College in 1967 and aimed to resume running of Lingnan University in Hong Kong. In 1969, the school groups and sponsoring bodies of Lingnan Secondary School and that of Lingnan College were merged and the current Lingnan Education Organization was formed.

The establishment of Lingnan Education Organization shows the unity and commitment of Lingnanians in expanding education services in Hong Kong. After years of work, the organization finally completed the mission of resuming the running of Lingnan University in Hong Kong in the last century. Today, Lingnan University is a government-funded university regulated by the “Lingnan University Ordinance”. Moreover, today Lingnan Education Organization also includes the sponsoring bodies of Lingnan Secondary School, Lingnan Dr. Chung Wing Kwong Memorial Secondary School, Lingnan Hang Yee Memorial Secondary School, Lingnan Primary School and Kindergarten and Lingnan Day Nursery.

Last year, Elder Academy at Lingnan, sponsored by the Labour and Welfare Bureau and the Elderly Commission, was launched by Office of Service-Learning, Asia-Pacific Institute of Ageing Studies of Lingnan University and 4 sister schools under Lingnan Education Organization. Lingnan University cooperated with the sister schools again to provide various learning opportunities for the elderly. Furthermore, the scheme encouraged students to be involved in innovative community service projects. For example, the scheme allows the elderly to go to school and university classes with students. This not only satisfies the learning needs of both the young and old, but also enhances the communication and understanding between them.

The Other Learning Experiences (OLE) in the “3-3-4” New Secondary School (NSS) academic structure and curriculum, launched by the Education Bureau, shares similar purposes as that of the “Elder Academy at Lingnan”. OLE emphasizes students’ moral and civic education, aesthetic development, physical development, community service and career-related experiences. The Elder Academy at Lingnan is a special scheme because it is not merely a social service for the elderly, but rather, a scheme that can be integrated into the education system. This handbook shows how the collaboration of Elder Academy and OLE can provide a practical platform to enhance students’ learning, promote harmony in the community and facilitate the reciprocal communication between the elderly and youngsters.

Facing waves of education reforms, Lingnan Education Organization will act according to its tradition and prepare well to meet the requirements the new age has on education. With the motto of “Education for Service”, the organization will continue providing students with a good study environment and nurturing their “red-grey spirit”. Consequently, students would become responsible, creative, humble, warmhearted Lingnanians and serve society with perseverance and determination.

Mr. WONG Chi Kwong, Patrick
Chairman, Lingnan Education Organization
Lifelong learning is much encouraged in our society nowadays. In spite of the decline in body functions, people in old age have the intelligence and abilities to acquire new knowledge and skills. The elderly people do grow and develop through learning and teaching. With their knowledge, life experiences and special abilities, and through continuous learning, the elderly people can inspire others and make contributions in the society. Social Welfare Department provides care for the elderly, and also launches the “Opportunities for the Elderly Scheme” every year to encourage the elderly people to be active in their daily life and to keep up with the progress of the society. The World Health Organization has emphasized that lifelong learning is a key for the elderly people to enjoy their lives, to have active participation in the society and make contributions in various ways.

Since 2007, the Labor and Welfare Bureau and the Elderly Commission have promoted the “Elder Academy Scheme” in schools and through cross-sectoral and inter-generational collaborations. On one hand, the elderly people can learn new knowledge and skills, and set new goals in their life. On the other hand, the younger generation can share the wisdom of the elderly people through participating activities and volunteering work with the elderly people. The “Elder Academy Scheme” benefits the elders, and also brings the elderly and young people together. Since its launch, there are a lot of positive feedbacks.

Living up to the motto “Education for Service”, the Lingnan University actively promotes the “Elder Academy Scheme” and over the years has many elderly students. The Lingnan University earnestly connects their affiliated tertiary institutions, secondary schools, primary schools and pre-schools so as to provide the elderly students with more activities at different levels, for matching the interests and learning curves. There has been a lot of mutuality as well as reciprocity in teaching and learning for the elderly and the young people.

The Lingnan University together with its affiliates and the “Elder Academy” schools have published “A Handbook for Using Elder Academy as a Platform of Other Learning Experiences” for sharing the experiences in the implementation of the “Elder Academy”. This handbook is intended to be a reference for interested organizations to understand the planning and execution of the curricula and activities of the “Elder Academy”. With the use of Handbook, there would be more new ways of mutual learning to the benefits of the elderly and young students.

I have every appreciation of the schools and organizations which have taken part in the “Elder Academy Scheme” in Tuen Mun district. The Lingnan University has made splendid efforts in promoting lifelong learning and in developing the “Elder Academy Scheme”.

Let us carry on with the learning spirit, learn together and understand more and better of each other, regardless we belong to the young or elder generation in the society.

Ms. LEUNG Kwai Ling
District Social Welfare Officer (Tuen Mun), Social Welfare Department

Other Learning Experiences (OLE) is one of the three components that make up the New Senior Secondary (NSS) academic structure and curriculum, taking up over 15% of the total teaching hours. Unlike regular subjects, OLE allows greater space in the curriculum for students’ whole-person development, enhancing students’ interest and ability to engage in lifelong learning. Accumulating activity hours is not the major focus in OLE but instead the precious opportunities for students to learn, develop, broaden horizons, and hence build a solid foundation for their future.

Unlike voluntary services, the community services in OLE enable students to not only meet different community needs but to also experience high quality learning through reflecting on their organization and participation in various activities. As a result, students’ empathy, social awareness and respect for other people, as well as core values and attitudes emphasized in moral and civic education (e.g. love, respect and care for others and social responsibility, etc.) are fostered. All in all, learning is the soul of social services.

Besides, OLE provides a great platform for collaboration among schools and social service agencies. When schools and organizations work together, teachers and organizations’ staff should play different roles in facilitating effective and continuous learning among students.

Tao Xingzhi, a famous modern Chinese educationist, proposed the idea of “society is school”. He suggested the combination of social and school lives to increase the efficiency and effectiveness of university education. Using Elder Academy as a platform of OLE indeed demonstrates the spirit of “society is school and life is education” and a quality community collaboration mode.

Last but not least, I wish that “A Handbook for Using Elder Academy as a Platform of Other Learning Experiences”, co-edited by Office of Service-Learning, Asia-Pacific Institute of Ageing Studies of Lingnan University and Lingnan Education Organization, would become a useful reference and resource for schools, youth and social service organizations, further enhancing our understanding of social services and practical knowledge.

Mr. YIP Yam Wing
Chief Curriculum Development Officer (Life-wide Learning & Library)
Having a concern for the welfare of senior citizens, Chairman of the Elderly Commission, Dr. Leong Che Hung, introduced the Elder Academy Scheme in 2007, enabling the elderly to be contributive and enhancing intergenerational harmony. With the belief of “serving the community with compassion”, Yan Chai Hospital has been actively participated in the Scheme since its launching. Elder Academies operated by Yan Chai Hospital consists of 8 institutions, including primary and secondary schools which spread over the districts of Tuen Mun, Tsuen Wan, Kowloon and Sai Kung.

In order to facilitate the operation and make the best use of the resources of Elder Academies operated Yan Chai Hospital, a post of “Yan Chai Elder Academy President” was created, who is responsible for handling executive planning for further development of Elder Academy (EA). In terms of course design, 3 schools in Tuen Mun (Yan Chai Hospital No.2 Secondary School, Yan Chai Hospital Law Chan Chor Si Primary School and Yan Chai Hospital Ho Sik Nam Primary School) are pioneers in building networks between the courses offered by primary and secondary school students. In 2009, the “credit transfer system” was introduced and has been highly supported by all the 8 elder academies in Tuen Mun.

EA is not only an academic institution, but also a platform of exchange for the elderly to fully engage into the community. In 2009, Yan Chai Hospital No.2 Secondary School and Tuen Mun Elder Academy set up a Chinese New Year market stall in the Victoria Park, with funding from a private enterprise, and sold calligraphy and New Year decorations made by the elderly. Moreover, the academy organized the Yan Chai Elder Academies Exhibition, published a book and distributed elders’ work to other education institutions. This acknowledges the elders’ dedication and progress in learning. It also reminds the public of the responsibilities in caring for elders and treasuring their families. At the same time, it enhances the public’s understanding of the Elder Academy.

Though currently the courses in EA are mainly interest classes and experiential in nature, the academic and learning elements inside merge seamlessly with the Other Learning Experiences of the New Senior Secondary academic structure and curriculum. Thus, synergy is achieved and learning is enhanced for both students and elders. I thank Lingnan University for taking a leading role in the compilation of this handbook, with other elder academies and the Elder Academy at Lingnan, contributing to the field of education.

Mr. CHAN How Chi
President, Tuen Mun Elder Academies Commission
Vice Supervisor of Yan Chai Hospital No.2 Secondary School
Advisor, Elder Academy at Lingnan

Lingnan Dr. Chung Wing Kwong Memorial Secondary School has inherited the spirit of Lingnan Education Organization, taking “Education for Service” as its education motto. The school has set a “whole-person education activities” structure for students to grow and learn from different aspects.

The New Senior Secondary (NSS) academic structure and curriculum, which aims to enhance students’ skills, knowledge and attitude through activities and experiences, echoes with the existing school focus in training students’ multiple intelligence and skills. Other Learning Experiences (OLE) in the NSS academic structure and curriculum facilitate the integration of knowledge and experiences. A new light in teaching and learning would shine if a more comprehensive platform can be built.

Lingnan University encourages the elderly in self-learning with the trend of population ageing. A few years ago, Lingnan University cooperated with primary and secondary schools of Lingnan Education Organization and launched “Elder Academy at Lingnan” (LUEA). After discussing with Lingnan University, we realized that the ideology and structure of LUEA match with the schools’ existing service learning projects. For example, “Promoting Technology in Hong Kong”, “Community Classroom”, and “Demolishing the Digital Divide in Society”, etc. Therefore, we are very glad to develop and promote Elder Academy together with the Office of Service-Learning and Asia-Pacific Institute of Ageing Studies, Lingnan University. Ideas and thoughts can be exchanged among participating schools and NGOs. We hope our experiences in implementing OLE will be able to serve as a reference for other schools or organizations and contribute to the education reform in Hong Kong.

Dr. LI Shing Sun
Principal, Lingnan Dr. Chung Wing Kwong Memorial Secondary School
With the motto of “Education for Service”, Lingnan Hang Yee Memorial Secondary School has strongly encouraged students to participate in community service and care for others since 2004. By providing students with the opportunities of interacting with the disadvantaged in society, we hope that they will treasure what they have and extend a helping hand to those in need. Therefore, different classes, groups and school societies organize various social service projects frequently, aiming to create opportunities for students to serve the community.

Last September, as a member of Lingnan family preparing for community services for the Other Learning Experiences (OLE) of the New Senior Secondary (NSS) academic structure and curriculum, we joined the Elder Academy at Lingnan Scheme, together with HKLSS Harmony Garden Lutheran Centre for the Elderly, upon the invitation of Lingnan University. This scheme provided both junior and senior secondary students with a lot of Service-Learning opportunities. Service-Learning and lightened teachers’ workload in searching for Service-Learning activities. Students actively participated in the preparation and implementation of the activities, which allowed them to serve the elderly in the district directly. Reviewing the scheme in 2008-09, we have observed that students reported a great sense of satisfaction from organizing activities and the appreciation from the senior citizens. They also showed improvement in problem-solving and communication skills. Through interacting with the elderly, students gain a better understanding of their needs, learn from their rich life experiences, and reflect upon their own attitude towards life, which allow them to set more concrete life goals for themselves.

In the coming year, we expect that every student in Form 4 could take part in at least one Elder Academy (EA) activity organized on a class basis in order to enhance class unity and satisfy the basic requirements of OLE. We also wish that students would take the initiative to participate in EA activities, which could be course or unit-based, or in the form of extracurricular activities, in order to enjoy a more fulfilling, fruitful and effective NSS school life.

Ms. LI Sau Yee
Principal, Lingnan Hang Yee Memorial Secondary School

With the implementation of the New Senior Secondary (NSS) academic structure and curriculum, students’ learning experience has become more concrete and fruitful. Unlike the traditional way of learning which was subject-directed, students’ individual needs, interests and talents are taken into consideration. The Other Learning Experiences (OLE) emphasizes whole-person development, allowing students to grow and develop all round. Our school is honored to have the help from Professor Alfred Chan Cheung Ming, Dr. Carol Ma Hok Ka and research staff from Lingnan University in integrating academic knowledge into community services (i.e. Service-Learning) of OLE. Our students are able to experience world-class Service-Learning. Service-Learning not only trains students to become service leaders who care for the community, but also allows them to apply their academic knowledge and skills learned in class. All these echo the whole-person development of students required in the NSS academic structure and curriculum.

Mr. CHAN Ka Yun
Principal, Stewards Ma Kam Ming Charitable Foundation Ma Ko Pan Memorial College

In 2004, the Hong Kong government introduced the New Senior Secondary (NSS) academic structure and curriculum, aiming to provide a more diverse and equal learning opportunities for senior secondary students. The curriculum was launched in 2009, in which Service-Learning is an essential component of Other Learning Experiences (OLE), and all students must participate in it. As early as in 2003, our students were already required to serve the community for at least 4 hours every year under “One Student One Service Scheme”. In fact, a lot of students have devoted more than the required 4 hours in social services. The “Social Service Committee” has been established in recent years to actively promote Service-Learning and encourage students to participate in various service projects. In 2008, the “Learning Experience Portfolio” was launched, and social services have been emphasized. More than 90% of junior form students fulfilled the minimum requirements of social services and among them, over 30% requested to serve more. The establishment of Elder Academy (EA) provides an ideal Service-Learning platform for students.

In the past, the elderly services held by schools used to be in the form of visits or fundraising, and interactions were one-way. Using EA as a sustainable learning and service platform, the quality ofelderly services can be significantly improved through students’ active participation in helping others to help themselves. EA allows schools to gain experience in implementing the NSS academic structure and curriculum. It also encourages the “Social Service Committee” and EA volunteers to achieve greater success. In 2009, our hard work was recognized, and the school was given the “Voluntary Services Gold Award” by the Social Welfare Department.

Elders’ determination in lifelong learning was highly respected by the public. The Chinese culture of respecting and taking care of the elderly does not stop at material provision. Showing genuine respect and caring in every possible way are the most important. Senior citizens have accumulated rich life experiences, knowledge and wisdom. Youngsters are quick to learn and familiar with modern knowledge and technology. EA is therefore more than an ordinary social service project. It is a precious moral education and learning opportunity for the participants. Those who teach and those who learn both benefit from the in integration of serving and learning, resulting in intergenerational harmony. Whole-person development as well as the fulfillment of the NSS academic structure requirements can be achieved. As educators, we will continue to offer full support and contribute to society, as well as provide students with more resources.

Mr. YU Tai Wai
Principal, Yan Chai Hospital No. 2 Secondary School
Without the cooperation and support from many parties, Elder Academy at Lingnan would not have succeeded. Lingnan Education Organization, Office of Service-Learning and Asia-Pacific Institute of Ageing Studies, Lingnan University thereby would like to sincerely thank Lingnan Dr. Chung Wing Kwong Memorial Secondary School, Lingnan Hang Yee Memorial Secondary School, Yan Chai Hospital No. 2 Secondary School, Stewards Ma Kam Ming Charitable Foundation Ma Ko Pan Memorial College, and all our partners. With their generous support and help, we have successfully completed this handbook, connecting the young and old generations and encouraging elders to adopt an “active ageing” lifestyle.

Once again, we would like to express our gratitude to the following personnel, organizations, and institutions:

The New Senior Secondary (NSS) academic structure and curriculum of Hong Kong was officially implemented in September 2009. Instead of “3+2+2+2 education system” (3 years of junior secondary, 2 years of senior secondary, 2 preparatory years, and 3 years of university), a new “3+3+4 education system” (3 years of junior and senior secondary education respectively, and 4 years of university) has been adopted. The Hong Kong Certificate of Education Examination (HKCEE) and Hong Kong Advanced Level Examination (HKALE) have been merged into one—the Hong Kong Diploma of Secondary Education (HKDSE), in order to reduce students’ stress and time in preparing for examinations.

With the decreasing time for examinations, more time will be available for learning. Hence, students can participate in more extra-curricular activities for whole-person development. Through enriching students’ life experiences to achieve balanced and all-round development, our education system would be more comprehensive.

During the development of the new curriculum, schools’ workload may increase. Thus, making use of resources already available may reduce future and even current stress and at the same time, achieve greater effectiveness. The elderly is one of the valuable resources. Ageing population in Hong Kong can be considered as either a “problem” or a “resource”. The rich life experiences of the elderly are very valuable because they can provide different learning elements to the younger generation and become an important asset in education. This handbook takes the integration of OLE and Elder Academy (EA) as an example to demonstrate how students’ OLE could be enriched.

1.1 The New Senior Secondary (NSS) Academic Structure and Curriculum -- Other Learning Experiences (OLE)

The NSS academic structure and curriculum, introduced by the Education Bureau, is made up of 4 core subjects, 20 electives (including applied learning and language courses) and a new element called OLE that complements the other subjects. OLE aims at nurturing students all-round.

According to the Education Bureau (2009), OLE is based on 5 essential areas in basic education (Primary 1 to Form 3), namely ethics, intellect, physique, social skills and aesthetics. Thus, OLE also includes 5 elements, namely, Moral and Civic Education (nurturing students’ positive values and attitudes: Honesty, Caring, Perseverance, Respect for Others, Responsibility, National Identity and Commitment); Community Service (nourishing students’ sense of social responsibility and commitment); Career-related Experiences (linking school learning to the real world, cultivating students’ appropriate values and attitudes and developing lifelong learning ability to prepare for their future career); Aesthetic Development (nurturing students’ creativity and aesthetic sense, culture and manners, positive attitudes, ability to express, and broadening their horizons); and Physical Development (enhancing students’ physical abilities, increasing confidence, developing active and healthy lifestyle, positive attitudes and values, and abilities to cooperate, communicate, create, think critically and judge aesthetically). Through diverse learning styles, students could broaden their horizons, develop lifelong interests and their learning abilities enhanced.

1.2 The Elder Academy

Ageing population is becoming a major concern in Hong Kong. The government has always been aiming to encourage the elderly to live a fruitful life. Well-structured self-learning programs for senior citizens have been implemented in different countries since the 70’s. In order to inspire elders to pursue learning and enhance their sense of belonging, health and worthiness, the Labour and Welfare Bureau and Elderly Commission started the Elder Academy scheme in early 2007. The scheme was specially designed for Hong Kong, utilizing schools as a platform, promoting lifelong learning and harmony between different generations and sectors through the collaboration across sectors (education and social welfare), as well as among departments, schools (including primary, secondary and universities) and organizations (government and non-government).

1.3 Purpose of this Handbook

This handbook will discuss how school syllabus, OLE and EA can be integrated. It will provide some structures for schools as a reference and help develop a comprehensive learning plan. Besides, the handbook will mention different roles and responsibilities of stakeholders, as well as the suggestions and guidelines for assessment.

The programs and activities in the “Elder Academy at Lingnan” will be taken as examples to demonstrate the guidelines. This can provide a better understanding of the operation mode of the integration between school curricula, OLE and EA. Hence, interested stakeholders can perform their own plans more systematically and effectively.

1.4 Structure of this Handbook

This handbook has been divided into 12 parts:

Part 1 Background Information

Includes the background information of OLE and EA to help readers use the book more efficiently.

Part 2 Analysis of the overall structure of Other Learning Experiences and Elder Academy

Provides a comprehensive analysis of the structures of OLE and EA to help readers understand their ideology, implementation and relations between the two.

Part 3 Cooperation among Other Learning Experiences, Elder Academy and School Syllabus

Describes how the school curricula, OLE and “Elder Academy at Lingnan” will be matched with each other and in 3 different teaching and learning modes.

Part 4 Preparation, Implementation and Assessment of the collaboration of Other Learning Experiences, Elder Academy and School Syllabus

Lists the roles and responsibilities of different stakeholders, ensuring that every stakeholder is clear about their roles and providing guidelines.
A Handbook for Using Elder Academy as a Platform of Other Learning Experiences

Part 5 Integration of Other Learning experiences and Elder Academy: Assessment

Introduces different assessment methods and contents: effectiveness of the project, personal growth of students, changes of health, personality and learning attitude of the elderly, etc. This part also includes the analysis of the scheme results, aiming at improving the comprehensiveness of the projects.

Part 6 Teaching Modes

Describes and explains 3 different integration modes of OLE and EA to help readers understand the related operation in schools.

Part 7 Points to Note

Points out and explains the major concerns and difficulties encountered in the implementation of EA.

Part 8 Misconceptions

Part 9 Conclusions

Part 10 References

Part 11 Appendices

Includes course, activity and teaching materials.

Part 12 Information of Participating Schools

Illustrates how the background and missions of schools relate to the operational mode for different schools.

Part 2 Analysis of Other Learning Experiences and Structure of Elder Academy

2.1 Other Learning Experiences

2.1.1 Structure and Theoretical Basis

In the past, Hong Kong's education system tended to focus on students' academic achievement than the development of their personal abilities and skills. Therefore, the New Senior Secondary (NSS) academic structure and curriculum has been adopted for students' whole-person development. In addition to the 8 Key Learning Areas (KLAs)—Chinese Language Education, English Language Education, Mathematics Education, Science Education, Technology Education, Personal, Social and Humanity Education, Arts Education and Physical Education, courses with experiential learning elements are introduced to enrich students' learning as well as develop the linkage between different KLAs (See Figure 1). Other Learning Experiences (OLE) is the extension of the 5 learning experiences in the basic education curriculum. Schools are required to provide OLE (Moral and Civic Education, Community Services, Career-related Experiences, Aesthetic Development and Physical Development) opportunities to students, whether it is during contact hours or not.

2.1.2 Implementation

Other Learning Experiences (OLE) is part of the New Senior Secondary (NSS) academic structure and curriculum. The Education Bureau advises schools to arrange the three-year Senior Secondary courses and allocate school hours accordingly: Other Learning Experiences (15-35%), Core subjects (45-55%) and Elective subjects (20-30%). Time spent on the 5 aspects should follow the guidelines (shown in Figure 2).

![Figure 1 The relationship between Life-wide Learning and KLA](source)

![Figure 2 The implementation of Other Learning Experiences](source)

2.1.3 Assessment

School-based assessment of OLE values both quantity and quality. In terms of quantity, the Education Bureau requires all secondary schools to allocate at least 405 hours to OLE in the timetable of senior secondary students, which help ensure that students are provided with the opportunities for all-round development as well as in-class knowledge.

In terms of quality, using the “Assessment for Learning” to examine students’ achievement from OLE activities encourages their continuous learning and participation. All the activities and experiences should be recorded in “Student Learning Profile” in order to assess students’ achievement. Together with the Hong Kong Diploma of Secondary Education (HKDSE) Examination, “Student Learning Profile” would be considered as a reference for students’ university admission. Details can be found in Part 5 of this handbook.

2.2 Elder Academy

2.2.1 Vision

In 2007, the Elderly Commission and the Labour and Welfare Bureau launched the school-based Hong Kong-style Elder Academy scheme. Following the vision of the University of the Third Age (U3A) in Hong Kong, this scheme aims to promote the idea of “sense of belonging, sense of security and sense of worthiness in elders” and encourage the elderly to keep learning and making contribution to society. Through various learning and volunteering activities, the concept of “active ageing” and a healthy and fruitful lifestyle have been promoted.

Elder Academy (EA) promotes lifelong learning and intergenerational harmony which is beneficial to both students and the elderly. For students, EA provides them with a platform to put their academic knowledge into practice, gain experience and learn various skills through organizing different activities. For the elderly, they are encouraged to play an active role in the operation of EA, achieving the goal of elderly-directed activities. As a result, the goals of lifelong learning and cross-sectoral and intergenerational harmony can be achieved with the support from different social sectors and networks.

2.2.2 Mission

The mission of the scheme is to enrich lives through conveying the message of lifelong learning. Different courses and activities can be organized with the venues and facilities provided by schools. A communication channel and a win-win situation can be created for both younger and older generations.

The following goals are expected:
1. Enabling students to demonstrate their strengths in OLE engagement by organizing and participating in EA activities;
2. Inspiring students to care for the elderly and serve the community;
3. Developing elders’ spirit of “sense of worthiness” and lifelong learning;
4. Satisfying elders’ learning needs by providing various formal courses;
5. Cultivating intergenerational harmony in the community.

2.2.3 Structure

With the support of primary, secondary and tertiary institutions, EA makes the best use of existing resources and facilities (e.g. students and special rooms, etc) to offer diverse courses and activities for the elderly, enriching their retirement life. EA also provides the elderly with training opportunities, allowing them to take up organization roles, enhancing their strengths and skills.

In order to deepen the understanding between the two generations, a learn-and-teach dual identity model has been adopted in EA. Students and elders both assume the roles of tutors and learners, which further enhance learning effectiveness.

2.2.4 Implementation

There is no restriction on the implementation model of EAs, so schools and NGOs can design different courses and activities that fit the needs of different elders. Unlike the interest classes provided by some elderly centers, EA’s courses mainly comprise academic elements (except compulsory courses on health information) in order to encourage lifelong learning.

![Image of students and elders participating in Elder Academy activities.](image-url)
3.1 Learning Theories of Other Learning Experiences and Elder Academy

Since Hong Kong is developing into a knowledge-based economy, the traditional one-way and top-down teaching method (teacher-to-students) is no longer effective under the changing environment. Figure 3 is a “Learning Pyramid” showing the effectiveness of different learning methods. In the traditional teaching method, only 5% of knowledge will be transferred to students. Therefore, searching for a more suitable teaching method, which can enhance learning effectiveness, has become a major task for educators.

Experiential learning has been introduced since the late-20th century to improve learning effectiveness. It can remedy the limitations of the traditional one-way teaching method. As shown in Figure 3, if students learn through teaching others and using knowledge immediately, which is similar to the experiential learning, 90% of the knowledge can be retained. In fact, experiential learning has proven to be very effective in recent decades since its implementation.

The education philosophy and theoretical structure of experiential learning are based on the theories of educator John Dewey, social psychologist Kurt Lewin, cognitive psychologist Jean Piaget and scholar David Kolb Dewey (2007) suggested that learning is a continual process of restructuring and recreating experiences. Learning does not only come from reading and lecturing, but also from personal experiences, and recreating new knowledge based on individual abilities and requirements. This also echoes Dewey’s idea of “Learning by Doing” (2007). Learning is a cycle of experiencing, reflecting, and reconstructing. Students’ “Actions” should be related to their learned “Knowledge” and this should be adopted as the principle of taking actions.

The Experiential Learning Cycle (2009), which was developed by the social psychologist Kolb in 1984, has been widely adopted in contemporary education (see Figure 4). It includes 4 stages: firstly, students gain "Concrete Experiences" through taking actions; then they observe, reflect on and consolidate their experiences through "Reflective Observation"; together with learned knowledge, interpret the meanings behind and transform them into new knowledge in the process of "Abstract Conceptualization"; lastly, they put their new knowledge into practice by "Active Experimentation" to create new experiences. In other words, education should not focus only on teaching and assessing. Effective learning should be student-oriented, and allows them to put theory into practice and reflect on the process. Through reflective practices, students can become knowledge creators ready for the ever changing environment. Experience and knowledge are equally important for students to develop their talents and become interested in learning.

3.2 Structure and Future Development of the Collaboration of Other Learning Experiences and Elder Academy

3.2.1 Structure

OLE could be fulfilled through joining courses/activities of EA. The experience can also be linked to the school curriculum to enhance academic learning. Therefore, a comprehensive serving, teaching and learning mode can be achieved.
The integration of OLE and EA is based on the above framework, aiming to put the theory of experiential learning into practice. Through the integration, students can learn in classes, and at the same time, put their theoretical knowledge into practice. This can improve students’ interpersonal communication skills and cultivate their sense of knowledge transfer.

Teachers or trainers will facilitate students’ reflection by observing and taking actions. With the personal development and knowledge improvement, students would be able to develop strategies and ideas, and then take actions based on their experiences and academic knowledge.

EA does not only provide the linkage between students’ learning experiences and academic knowledge, but also creates a platform for the interaction between students and the elderly. Students not only learn to respect and care for the elderly, but also learn from the elderly’s stories and experiences. This can also improve students’ interpersonal communication skills and cultivate their sense of knowledge transfer.

For the elderly, on one hand, they can have lifelong learning opportunities; on the other hand, they can learn up-to-date information and regain the passion for learning from students. By combining EA and OLE, the ideas of intergenerational harmony and “education is life” can be enhanced and promoted.

### 3.2.2 Modes of Operation

As mentioned, EA serves as a platform for fulfilling the 5 areas of OLE (Moral and Civic Education, Community Service, Career-related Experiences, Aesthetic Development, Physical Development), providing new learning experiences to students. To maintain a sustainable development of the integration and enhance students’ knowledge and learning experiences, a step-by-step mode of development would be more suitable for the integration of EA, academic curriculum and OLE.

As the scheme can be implemented with great flexibility, the 3 modes suggested below are just for reference (Figure 6). Teachers could make adjustments based on their school policies and students’ learning progress in order to fulfill the requirements of OLE through EA as well as making sure that they fulfill the objectives of the senior secondary school curriculum. A “Through Train” model can also be attained in a cross-form development. More details, together with case studies of different EAs, will be illustrated in Chapter 6 of the handbook.

<table>
<thead>
<tr>
<th>Mode</th>
<th>Content</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mode 1: Integrated learning courses based on community services</td>
<td>Courses mainly focus on community service, such as regular visits to the elderly, doing volunteer work with the elderly, etc. They provide a platform for students to gain basic knowledge and skills for organizing community services. Students from different forms can participate in as all forms of volunteer work are equal in terms of level. EA activities emphasize community services and are not related to school curriculum. Also, there is no obvious linkage between different service activities. Taking the intergenerational calligraphy class under Aesthetic Development as an example, it simply makes use of EA as a platform for fulfilling the OLE requirements. The discussion of caring for the elderly under the Moral and Civic Education is another example. Mode 1 is a good starting point or pilot study for schools that wish to evaluate the effectiveness of the programs and prepare for Mode 2.</td>
</tr>
<tr>
<td>Mode 2: Integrated courses for a specific academic level</td>
<td>Taking a pilot study in a specific form, EA activities are integrated into one or more than one courses of that form. Thus, students can apply their knowledge when they participate in OLE. The most ideal form of implementing this mode is to cover the five areas of OLE and link them to academic study through EA. It is even better to link the activities with the curriculum of the Hong Kong Diploma of Secondary Education Examination. For example, “ageing population in Hong Kong” is one of the topics in Liberal Studies. Conducting OLE activities in related areas is good for students’ learning. Students can discuss about ageing population and filial values (Moral and Civic Education) or organize a carnival about the ageing population together with the elderly and NGOs (Career-related Experiences, Aesthetic Development and Physical Development). Through this platform, students can step out of the classroom, know more about the social issues and thus achieve putting theory into practice.</td>
</tr>
<tr>
<td>Mode 3: Integrated courses for different academic levels</td>
<td>This is a comprehensive integrated learning mode, which fully integrates EA into school curricula and OLE. A sustainable and cross-level platform for learning and practicing is created. It does not only enable students to apply their academic knowledge into real situations, but linkages between different academic levels are also formed. Because of the “Through Train” learning model, students will gain more in-depth knowledge when they are promoted onto a higher academic level. OLE becomes essential for gaining experiences, while the formats and contents will be adjusted accordingly. Take “environmental protection” as an example: it is a topic in the NSS Liberal Studies curriculum (it can also start from junior secondary level). Secondary 4 students can learn about the causes and effects of environmental pollution, and in the subsequent year, the issues of global warming and insufficient natural resources can be added. EA can be a platform to facilitate this kind of “Through Train” learning model, for instance, organizing a series of OLE and environmental protection activities (courses) accordingly. For example, Secondary 4 students can plant trees with the elderly and Secondary 5/6 students can design special systems and equipment to solve the pollution problem with the elderly. Mode 3 can enhance students’ learning as well as ensure continuity for both EA and the school curriculum, providing students with enough time for all-round development.</td>
</tr>

Figure 6 Different modes and contents
Part 4
Preparation, Implementation and Assessment of the collaboration of Other Learning Experiences, Elder Academy and School Syllabus

4.1 Implementation of the Scheme

OLE has been implemented since September 2009. Clear instructions and effective communication can facilitate the operation of the scheme. Similarly, active participation and effective communication are essential for the integration among OLE, EA and school curriculum. This chapter will explain the structure and preparation work of the scheme.

4.1.1 Cooperation among Organizations

At the beginning of the scheme, an organizing committee should be set up for the preparation, implementation and assessment. The units shown below should be set up in each EA and school respectively, and representatives should be sent for future coordination tasks:

1) School-based Elder Academy operating in school (School-based EA)
2) Other Learning Experiences Organizing Committee (OLE Organizing Committee)
3) School Curriculum Coordinating Committee
4) Administrative Committee

4.1.2 Relationships between Partnering Organizations

In the organizing committee, a representative from each unit should be included to facilitate the effective communication and coordination among different units in implementing the scheme. Responsibilities and duties of different units will be described in Part 4.3.

4.2 Process of the Scheme

The success of a scheme relies on the preparation, implementation, assessment and finally, the reflection which is beneficial for further improvement of the scheme.

4.2.1 Preparation

Preparation is essential as it determines and establishes the foundation of the scheme. The cooperation and communication between schools and partnering organizations are important for building an influential and sustainable operational mode (Figure 8).

<table>
<thead>
<tr>
<th>6-12 months before the school year</th>
</tr>
</thead>
<tbody>
<tr>
<td>• An Organizing Committee is formed by the School Curriculum Coordinating Committee, OLE Organizing Committee, School-based EA and Administrative Committee.</td>
</tr>
<tr>
<td>• The School-based EA is responsible for contacting targeted NGOs to explain its mission and vision.</td>
</tr>
<tr>
<td>• The School Curriculum Coordinating Committee is responsible for explaining the rationales (experiential learning) behind and the 3 modes of EA operation.</td>
</tr>
<tr>
<td>• The OLE Organizing Committee is responsible for introducing the operation of the scheme and discussing how to record using the &quot;Student Learning Profile&quot;.</td>
</tr>
<tr>
<td>• Organizing Committee is responsible for designing appropriate courses and services, based on students' and elders' needs, and other environmental factors.</td>
</tr>
<tr>
<td>• The Organizing Committee sets the targets, mission and direction for future development and arranges the division of labor of all the units. This can facilitate future cooperation.</td>
</tr>
<tr>
<td>• The Organizing Committee is responsible for drafting a year plan* (including all information).</td>
</tr>
<tr>
<td>• Resources available, such as school facilities (computer room, hall, home economics room, etc.), promotional networks of social welfare organizations, venues available in the community, should be discussed at the meetings.</td>
</tr>
</tbody>
</table>

* Schools can choose a specific operational mode out of the 3 modes based on their own needs.
• The way the 3 elements (School Curriculum, Activities and OLE) are integrated is flexible; schools can adjust contents according to their policies and direction.

Figure 7 Structure and Relationships of the Organizing Committee

Figure 8 Preparation Stage—6-12 months before the school year
4.2.2 Implementation

After the school year starts, planned activities can be implemented. Evaluation and reflection are needed in this process. The activities should be recorded in the Student Learning Profile and become part of OLE. Details are shown in Figure 9.

</tr>
</tbody>
</table>

4.2.3 Final Stage

Students apply their knowledge and theory learned in the classroom onto their projects. Teachers facilitate students' reflection, enhance their knowledge as well as ensure the establishment of a solid foundation for further studies. Through the sharing sessions, teachers can assess students from various aspects, for example, academic knowledge, presentation skills, etc. For more details, please refer to Figure 10.

</tr>
<tr>
<td>- Assess students' performance.</td>
</tr>
</tbody>
</table>

Figure 9 Implementation–during the school year

Figure 10 Final Stage–end of the school year
Reflection is a continuous process of self-evaluation, so students should always think about their roles in the activity. The reflective process can help students gain experience, find the meaning of learning and raise their learning motivation (Figure 11). Students’ personal growth and quality of learning can be improved through reflection. Experiential learning requires students to learn through personal experience and feelings, which are affected by their background and abilities. Therefore, reflection is an essential part of this learning method. It also differentiates Service-Learning from ordinary activities or voluntary services. Through the platform of EA, students can review their learning process, organize and combine experiences and knowledge, and transform the experiences into new knowledge. At the same time, by strengthening and reviewing their OLE experiences, they can express and internalize their thoughts and feelings. Since students are still learning the method of thinking, teachers’ assistance is important during their reflection. Appropriate guidance and direction can help students in consolidating the experience and relevant knowledge. The process of reflection is shown in Figure 12.

Assessment

1. Students’ Grades
   No matter which mode a school adopts, they should explain to students and parents the assessment method clearly. In Mode 1, students mainly provide community services, which have little linkage to academic studies. Teachers can simply assess students according to their participation, teamwork, activity skills, etc. There can be discussion and explanation to facilitate students’ learning.

   Under Mode 2 and Mode 3, activities are linked to the school curriculum and OLE. Teachers can assess students’ learning and outcomes qualitatively and quantitatively. With different activities, assessment methods are diversified. Moreover, since OLE information will be recorded in the Student Learning Profile, this can be part of the assessment.

2. Assessing the Effectiveness of the Scheme (integration of school curriculum, OLE and EA)
   As many units are involved in the scheme, several approaches to evaluating and improving the effectiveness of the scheme can be used. Figure 13 lists the roles of different participants and means of assessment, both qualitative and quantitative.
### 4.3 Responsibilities and Tasks of Stakeholders

#### 4.3.1 Schools

1. **Committee members**
   - **Organizing Committee**
     
     The committee should be formed by representatives from schools and NGOs. It is responsible for arranging appropriate EA activities that fit the school curriculum as well as link up different units.

     Before the scheme starts, the committee needs to formulate the courses and year plan. Besides, promotional strategies, modes of operation, and financial, manpower and resources allocations have to be decided and monitored by the committee. All representatives should work together to ensure that the scheme runs smoothly, through regular observation, process recording, timely assistance and appropriate adjustment. Moreover, the committee can organize student training workshops and seminars, and even help establish student organizations. The committee not only helps train student leaders, but also assists teachers in students’ reflection and organizes the record of service hours (OLE hours fulfilled by participating in EA activities). At the end of the scheme, the committee is responsible for evaluating and analyzing the work and establishing a database for the scheme.

2. **School-based Elder Academy**

   When organizing OLE activities through the EA platform, school curriculum and OLE coordinators should first decide the future direction of the scheme, and then promote to elderly centers or NGOs for cooperation opportunities. Suitable activities (taking date, time, venue and contents into consideration) should be organized for students and the elderly. Evaluation of the activities should be reported to the organizing committee. In order to enrich EA activities, schools can co-organize activities with other EAs in different districts. Apart from organizing activities, one of the visions of EA is to enable elders to organize their own learning activities and gradually set up an elderly-and-students-directed Elder Academy Organizing Committee (like student leaders in schools), where the elderly and students can organize activities that are in line with the school’s direction for development.

3. **School Curriculum Coordinating Committee**

   The school curriculum coordinating committee is responsible for designing the course contents and means of operation. Taking EA as an example, the committee can prepare the course outline, formulate teaching materials, student guidelines, curriculum and operation guidelines, and then suggest how to integrate these courses into EA to the organizing committee. Teachers should explain to students the mode of operation of the scheme, supervise their work progress and lead the reflective and evaluating meetings, as well as assist students to complete the program.

4. **Other Learning Experiences Organizing Committee**

   OLE is one of the essential parts of the NSS academic structure and curriculum. Since there are various extra-curricular activities and learning methods to enrich students’ learning experiences, schools should suggest feasible activities under every area of OLE to the organizing committee. Then, they can contact NGOs for cooperation opportunities and coordinate the OLE activities. Moreover, the committee needs to build up and organize the Student Learning Profile, in order to manage students’ OLE hours and work progress as well as assess the program effectiveness. At the same time, the committee should report activity progress to teachers regularly to help them develop teaching materials and activity arrangement.

5. **Administrative Committee**

   The administrative committee plays an important role in the scheme as considerable amount of administrative work is involved. Administrative officers or assistants in the committee are mainly responsible for arranging meetings and contacting different parties. Other administrative work and external promotion are also the duties of this committee.
Individual members

1. Principal

The success of a scheme depends on the support of various parties, especially that from the leader of the school. The principal is the scheme advisor. He/She needs to attend organizing committee meetings, provide advice, allocate (financial and human) resources as well as be responsible for external promotion and building reputation, in order to attract more organizations or enterprises to provide learning opportunities for students.

2. Teachers

The NSS academic structure and curriculum requires students to create a Student Learning Profile, which is one of the entry assessments for their further education. When students participate in the EA or OLE activities, teachers can provide guidance on relevant knowledge, preparation works and activity arrangements, etc.

Through a series of training workshops, self-evaluation activities and sharing sessions, teachers can further assist students in combining theory with experience. Students can then complete and review their learning progress report effectively. At the same time, teachers can assist in recording students’ OLE learning hours in their Student Learning Profile, and thus, assess students’ performance effectively and give concrete comments and feedback on students’ reports and assignments.

In order to ensure that the scheme is running smoothly, teachers should work closely with their colleagues (including those who are responsible for EA and OLE activities), attend organizing committee meetings regularly and give suggestions for improvement.

3. Students

Although students do not have to fully participate in the preparation work, as learning is no longer done through a one-way knowledge transmission, they have the opportunities to experience the whole learning process, including organizing, operating, experiencing and evaluating the effectiveness of the scheme. Apart from attending training workshops and visiting agencies, students should have a positive attitude in participating in activities and accumulating experience, complete assignments on time, conduct self-reflection and respond to teachers’ advice. Upon completion of the activities, the Student Learning Profile, evaluation and presentations should be completed according to the criteria teachers have formulated.

4.3.2 Social Service Organizations

1. Staff of the Social Service Organizations

In addition to school committees, the participation of social service organizations is also very important. To accommodate the needs of both schools and the community, representatives from social service organizations should be included in the program and activity designs. Their participation can help connect school curriculum, OLE and EA activities. Moreover, details of activities, such as date, time, venue, mission and contents of the school courses, should be arranged and promoted to the elderly. Organizations should provide assistance and guidance to students (such as that on elderly care, activity arrangements and information gathering), help assess students’ performance and sign and issue related certificates. Last but not least, organizations need to keep in close contact with schools, attend organizing committee meetings regularly and provide suggestions.

2. The Elderly

Being the core of the scheme, active participation of the elderly is essential in promoting EA. By attending sharing sessions, the elderly can interact and share their life experiences with students so that they can act as role models for the students. Intergenerational harmony can be attained and students can gain knowledge outside the classroom through joining EA activities. At the same time, the elderly can make suggestions or get involved in evaluating the scheme based on their personal experiences.
4.4 Benefits of the Stakeholders

4.4.1 Students

Through the learning platform of EA, students can gain unique learning experiences outside the classroom, which is different from the traditional one-way teaching method. Instead, it is a student-oriented interactional learning mode. Students learn the importance of self-learning and use different learning methods (such as preparing and organizing activities) to build up their self-learning ability and knowledge. In this way, the contexts and teaching materials can be flexibly adjusted according to the needs and abilities of students; at the same time, interacting or even making friends with the elderly can help develop students’ communication skills and promote intergenerational harmony in society.

4.4.2 The Elderly

“Active Ageing” is a retirement concept being promoted all over the world. It emphasizes the meaningful life after retirement. Engaging in EA courses and activities, the elderly not only fully utilize their leisure time, but also achieve lifelong learning and their lives enriched. The elderly can learn new knowledge via this platform and share personal experiences and life stories with the community. They can also communicate with the younger generation and maintain healthy and normal social lives.

4.4.3 Teachers

Teachers might encounter difficulties as the scheme is still at the exploratory stage and much work on preparation and teaching materials is needed. However, once the project starts, it is not necessary for the teachers to make a new plan every time. This can reduce teachers’ stress and workload. Moreover, inter-linked activities should be designed to suit different forms of students and allow students to learn progressively, as well as ensure sustainability of the program.

4.4.4 Staff of Social Service Organizations

Social service organizations can develop into a new platform for volunteering, which promotes intergenerational harmony through providing opportunities for teenagers to care for and learn from the elderly. Moreover, the scheme can help group elders based on their needs. For those who are more independent, they can join and contribute to EA, so that social service organizations can allocate more resources for elders who are weaker and need urgent help. EA enables a better resource allocation, so appropriate services can be given to those elders in need.

4.4.5 Visiting Venue

Taking the project of Hong Kong Wetland Park as an example, it was co-organized by schools, professional organizations and the elderly, aiming at serving the community by transferring wetland related knowledge. The Wetland Park also provided training workshops and internships to the participants and organizations for promoting environmental protection knowledge to the community. This also helped build positive images of the participants and related organizations.

5.1 Assessment Structure

In the NSS academic structure and curriculum, OLE is not an independent subject. Instead, it can be immersed into other subjects and extracurricular activities for student development in multiple aspects. Different from traditional academic-focused education, the new curriculum balances classroom learning and social practice, through encouraging students to apply their knowledge and develop their talents. Thus, a multi-dimensional assessment method should be adopted, so that students can consolidate their academic knowledge and have less study pressure.

With reference to the Service-Learning assessment of Office of Service-Learning, Lingnan University (2008), learning effectiveness can be divided into 6 aspects, namely, subject-related knowledge, communication skills, organizational skills, social competence, problem solving skills and research skills. Schools can take the 6 domains as reference in assessing students’ performance in OLE. They can be concluded in 4 aspects and explained as below.

5.1.1 Knowledge (refer to 5.2.1, Figure 15)

It refers to students’ understanding of their academic course contents (Office of Service-Learning, Lingnan University, 2008). If OLE is linked to Liberal Studies, learning process can be measured in knowledge aspect. For example, Stewards Ma Kam Ming Charitable Foundation Ma Ko Pan Memorial College organized Liberal-Study activities with OLE elements through the platform of Elder Academy. Students observe the behaviors of the elderly and collect related data through “towel exercise” and Tai Chi event (related to physical development), in order to understand elders’ interests and habits in sports. Students’ analysis of the data collected can show if they are capable of developing their own skills using OLE. Assessment items can include subject-related topics, analysis in research projects, understanding and utilization of research methods, language use, etc.

5.1.2 Attitudes/Behaviors/Skills (refer to 5.2.1, Figure 16)

The whole-person development of students is one of the goals of the new curriculum. Thus, academic excellence is not the only criteria in assessing students’ learning performance. Students need to demonstrate their talents and skills by organizing and conducting activities in every aspect of OLE. When assessing students’ learning outcomes, personal qualities and skills should be considered to detect students’ changes in attitude and behavior. With reference to the model used by Office of Service-Learning, Lingnan University (2008), communication skills (ability to express and listen to others), organizational skills (ability to set priorities and allocate resources and workload), social competence (level of being accepted and ability to work in society, such as interpersonal relationships, self-confidence, social skills, etc.), problem-solving skills (ability to identify and skillfully solve core problems), research skills (ability to understand research method, conduct literature review and data analysis) can all be included as assessment criteria.

5.1.3 Values (refer to 5.2.1, Figure 17)

Personal growth and development are not the only focus in the new curriculum; positive values and the sense of belonging to society are also emphasized. Students need to broaden their horizons and develop positive worldviews through participating in different activities and social services, getting along and cooperating with different people. Thus, when assessing the effectiveness of the scheme, teachers can also observe students’ changes in their values, for example, caring about the community, citizenship and intergenerational harmony, etc.
5.1.4 Effectiveness of the Scheme/Learning Outcomes (refer to 5.2.1, Figure 18)

Integrating EA into OLE not only provides students with a channel to learn and practice, but also offers the elderly the opportunities for social participation and learning. Therefore, students’ performance in the process of organizing and implementing activities can become the reference for assessment, while the outcomes of activities determine the quality of students’ work.

5.2 Assessment Methods

In the past, academic result was highly emphasized as an indicator of students’ performance and progress, although academic performance cannot fully reflect their abilities and talents. However, under the new curriculum, especially the experiential learning mode in OLE, teaching will be done in various formats with different elements. As a result, a comprehensive and continual assessment method would be more suitable (Figure 14). Assessments could be divided into two categories: quantitative and qualitative. Quantitatively, numerical data will be used in assessment. Qualitatively, students’ changes in attitude and behavior and their improvement in knowledge and personal qualities will be emphasized. Some assessment tools can measure both aspects, as listed below.

1. Quantitative Assessment
   - Number of hours & participation frequency, results of questionnaires, pre- and post-test questionnaires, academic performance (tests & examinations), etc.

2. Qualitative Assessment
   - Examinations, activity logs, reflective journals, project presentations, Student Learning Profiles & in-depth interviews, etc.

Learning Outcomes
Subject related knowledge, communication skills, organizational skills, social competence, problem-solving skills, research skills, community care, civic orientation, & inter-generational harmony, etc.

5.2.1 Quantitative Assessment

(1) Number of hours and participation frequency

Students’ dedication and passion for activities can be observed from the level of their participation. Therefore the number of hours spent on activities and the frequency of participation can be used to measure students’ learning.

(2) Questionnaires/ Program Evaluation

After an activity/ scheme ends, questionnaires could be conducted to investigate participants’ satisfaction and suggestions towards the program’s objectives, effectiveness and arrangement. The results will reflect students’ ability to organize activities. By using a scoring system in the questionnaire, it would be easy for the participants to fill in; and at the same time, it would be convenient to directly compare the performance of different students. This also reflects students’ learning progress. Students can also write self- and program-evaluation reports to evaluate self-performance and level of satisfaction in the learning experience.

(3) Pre- and Post-test Questionnaires

In order to examine students’ understanding of subject related knowledge, pre- and post-test questionnaires can be used to compare the level of understanding before and after the activities. It is also difficult to show self-improvement and personal growth through academic results or activity profiles. Therefore, self-directed pre- and post-test questionnaires can be used. “Learning how to Learn” is important in the new curriculum. Skills and abilities, such as communication skills, organizational skills, social competence, problem-solving skills and research skills, are essential. Relevant questions can be included in order to track students’ changes in behavior. Some sample questions designed to assess students in different aspects are shown below.

5.2.2 Qualitative Assessment

(1) Academic Results (Tests, Examinations)
   Homework and tests are traditional methods of assessing students’ understanding and learning progress in terms of knowledge. As a school is a place for students to learn, their understanding and application of knowledge should be assessed. Teachers can use tests and examinations to assess students’ basic knowledge as well as skill application. Based on the subject-related knowledge, a standardized assessment criterion can be developed to evaluate students’ learning progress and assign different grades accordingly.

(2) Project Report
   The existing education system has been criticized for over-emphasizing students’ academic results and ignoring their daily learning performance and talents. Therefore, project or activity reports are added to the assessment under the NSS academic structure and curriculum, which allows students to work on the topics they are interested in. In addition to activity reports, teachers can also encourage students to write reflective journals, which include learning progress, strengths and weaknesses of the whole process, and suggestions for improvement. Moreover, regular consultations by and feedback from teachers can help track students’ research progress and facilitate their personal development, through knowledge consolidation and reflection on learning experiences. Thus, the grade of students’ reports can reflect their continuous learning outcomes. For more information, please refer to “Student Service Record” (Appendix 1) and “Assembly Record” (Appendix 2) of Stewards Ma Kam Ming Charitable Foundation Ma Ko Pan Memorial College.

(3) Student Learning Profile
   Under the NSS academic structure and curriculum, in addition to the results from public examinations, students’ participation in extra-curricular activities and out-of-classroom experiences will be counted as one of the criteria for further studies. Thus, besides academic results in school, performance in OLE, competitions (either in-school or others), various learning and training classes, achievements and personal skills and abilities (such as being a coordinator in organizing an event or a leading performers at a performance etc.) can be taken into account. In the profile, students will report and reflect on their learning experiences. The profile contents can thus help understand students’ learning experiences.

5.3 Analysis and Suggestions of Assessment Results
   Since the scheme is still at a piloting stage, systematic assessment and analysis are not yet available. However, this handbook provides the principles and structure of the assessment, which can be used by different EA stakeholders to evaluate the effectiveness of the scheme. Lingnan University will analyze the teaching plans shown in the handbook to examine how EA influences OLE and its effectiveness. Results would be announced upon the completion of the project.

Integrating Elder Academy (EA) into secondary school curriculum does not mean that students can only learn about the ageing population or Gerontology. Through different elder learning activities, students can apply what they have learnt, develop their talents and teach elderly learners different academic knowledge. Consequently, the elders would be able to keep up with the times, absorb knowledge and skills, and have a deeper understanding of modern technology as well as current social issues. In addition, the elderly can share experiences and communicate with youngsters through the activities. They can even make use of their strengths and experiences to teach students various skills.

As mentioned above, schools can choose a single mode or a mixed mode (Figure 20) according to their school policies and student development. The courses or activities can last for either one school year or one term. The followings are different teaching plans provided by schools. They can serve as references and adjustment should be made according to different course requirements.

---

Figure 20 Development of Different Modes
6.1 Mode 1: Solely Social Services

Mode 1 focuses solely on social services. Most of them are one-off visits to the elderly with no linkage to school curriculum.

6.1.1 Example 1: Lingnan Hang Yee Memorial Secondary School

Taking activities in Lingnan Hang Yee Memorial Schools as examples (see Figure 21): Only 1-2 visits or activities and does not involve subject learning.

Figure 21 Lingnan Hang Yee Memorial Secondary School

<table>
<thead>

</tr>
</thead>
<tbody>
<tr>
<td>Elderly Center / Home Visits</td>
</tr>
<tr>
<td>(1) Objective(s): To encourage students to communicate directly and make friends with the elderly. Through the process, students are able to understand the elders' characteristics and needs, and compare the experience with what they have learned in school. Not only the Community Service in OLE, but also the other elements can be satisfied, depending on the nature of the activity.</td>
</tr>
<tr>
<td>(2) No. of Visit(s): 1-2</td>
</tr>
<tr>
<td>(3) Format &amp; No. of Participants: Mainly visits, performances and interactive games</td>
</tr>
<tr>
<td>(4) Contents: The first visit is mainly organized by teachers. Students are encouraged to arrange the details and gain the experience of organizing an event. Students become more important in the upcoming visits and will be entrusted with some parts of the event. Students can apply their knowledge of Gerontology and get a taste of teamwork, communication, organizational, and leadership skills can be enhanced.</td>
</tr>
<tr>
<td>(5) Possible Subject(s) involved: OLE—Community Service; if students learn something new through preparing for a performance, the related knowledge and skills generated can be classified as Aesthetic Development or Physical Development, depending on the experience.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Stall Games Day/Carnival (Co-organized with elders)</th>
</tr>
</thead>
<tbody>
<tr>
<td>(1) Objective(s): To encourage the cooperation between the elderly and youngsters in organizing large-scale events with the same goal. This young-old partnership enables the two generations to exchange ideas, gain better mutual understanding and learn the strengths and working habits of each other.</td>
</tr>
<tr>
<td>(2) No. of Session(s): One-off activity</td>
</tr>
<tr>
<td>(3) Format &amp; No. of Participants: Depends on the nature of the activity</td>
</tr>
<tr>
<td>(4) Contents: A series of activities targeted to teachers, students or even the public is designed. The theme can be the physical and psychological health of the elderly, social issues and school curriculum related areas (e.g. environmental protection, anti-drug abuse, sport events, and national education).</td>
</tr>
<tr>
<td>(5) Possible Subject(s) involved: OLE—Physical Development, Aesthetic Development, Moral and Civic Education</td>
</tr>
</tbody>
</table>

6.1.2 Example 2: Yan Chai Hospital No.2 Secondary School

Yan Chai Hospital No.2 Secondary School co-organizes activities with Elder Academy and promotes the “One Student One Service Scheme”, to nurture students’ passion for serving the community. The nature and content of the activities mainly focus on promoting intergenerational harmony without involving academic learning. Please refer to Figure 22 for details.

Figure 22 Yan Chai Hospital No.2 Secondary School

<table>
<thead>
<tr>
<th>Activity/ Course Content</th>

</tr>
<tr>
<td>(2) No. of Visit(s): 2-3 times per school year</td>
</tr>
<tr>
<td>(3) Format &amp; No. of Participants: Mainly visits/ students from 2-3 forms every time</td>
</tr>
<tr>
<td>(4) Content: Students from various forms visit and send greetings to the elderly in different festivals (such as Dragon Boat Festival, Mid-Autumn Festival and Chinese New Year). Before the visit, a briefing session is organized to remind students of the activity details. Students’ communication skills and the sense of caring for others can be enhanced.</td>
</tr>
<tr>
<td>(5) Possible Subject(s) involved: OLE—Community Service, Moral and Civic Education</td>
</tr>
</tbody>
</table>
6.2 Mode 2: Form-based Integrated Project Learning

This is developed from Mode 1, using one form as an entry point to integrate Elder Academy with school curriculum. Students can apply their academic knowledge in OLE activities and teachers can develop a set of comprehensive teaching materials for the whole form.

6.2.1 Example 1: Stewards Ma Kam Ming Charitable Foundation Ma Ko Pan Memorial College

The school expands Mode 1 by adding academic elements into the activities and develops Mode 2 for a specific form (as shown in Figures 23 & 24).
The program targets students who have completed the middle and senior cycles and includes cross-subject studies in Liberal Studies, Nursing, and OLE—Career-Related Experiences. The program aims to nurture students’ personal qualities (such as patience and communication skills), and raise self-confidence in giving speech and communicating with others through teaching elders. Students’ teaching what they have learnt in class can enhance their learning. Moreover, the elderly can also learn new things and keep updated with society when they are taught by students.

(2) Number of Session(s): 2-4 sessions

(3) Format & No. of Participants: Mainly in the form of lectures and learning activities. Students pair up with the elderly and act as tutors.

(4) Content: Students need to learn information technology skills, for example, sending SMS, playing digital music or videos, Chinese input, writing blogs, surfing the Internet and composing web pages in class first. Then, they teach elders what they have learnt. Students’ personal growth can be enhanced throughout the process.

(5) School Curriculum: Computer Literacy, Liberal Studies, OLE—Community Service

Cross-Subject Project
Chinese/English Language: Report writing skills, oral presentation skills
Learning Project
Group oral presentation and report
Assessment
Students’ projects and performance are assessed by subject teachers, classmates and the elderly.

Figure 24 Stewards Ma Kam Ming Charitable Foundation Ma Ko Pan Memorial College

<table>
<thead>
<tr>
<th>Course Content</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cross-Subject Studies—Liberal Studies: Hong Kong History, Chinese Culture</td>
</tr>
</tbody>
</table>

(1) Objectives: To raise students’ subject knowledge and to understand their observation skills and analytical abilities, through the individual or group projects conducted by them.

(2) Number of Session(s): 6 lectures and a practicum

(3) Format & No. of Participants: Individual or group projects with flexible formats

(4) Content: Students are free to choose topics that they are interested in within the areas of Gerontology and elderly welfare set by the teachers. Topics are narrowed down afterwards. Students then need to collect and analyze relevant information, orally report to teachers regularly and conduct reflections in different stages. Students can gain the knowledge of their interests through observation, data collection, and life experiences. At last, students need to hand in reports with detailed descriptions of their learning process, knowledge gain, personal growth and reflection. Teachers can also require students to report their findings in class to help train their presentation and communication skills.

(5) School Curriculum: Liberal Studies, Nursing, OLE—Career-Related Experiences

(6) Note: The service hours of the activities can be included in OLE under the NSS academic structure and curriculum. Details are shown as follows:
- Topic which the subject is broad enough and able to link up elder learning for “individual learning project”, e.g. “Elderly and Information Technology”, can be chosen.
- Under EA, Liberal Studies’ students are required to join a series of Service-Learning activities for nurturing positive attitudes (e.g. love and care, social responsibility). Students can fulfill the learning expectations of OLE as well as obtaining information and knowledge through oral history, interviews, etc. Thus, time devoted into these Service-Learning activities can also be recorded as OLE learning hours.

Visits/ Research Activities
Students work with elders to prepare for site visit and information collection.
### Activity/Course Content

**Basic Medical Care and knowledge about the Elderly**

<table>
<thead>
<tr>
<th>(1) <strong>Objectives:</strong> In order to enhance students’ knowledge and understanding of elders’ health (both physical and psychological), a more comprehensive and professional course on elders’ medical care should be created for students in higher forms. Moreover, students can work in the real world through practicum and gain precious work experience.</th>
</tr>
</thead>
<tbody>
<tr>

Figure 25 Yan Chai Hospital No.2 Secondary School
6.3 Mode 3: Cross-Grade Integrated Project Learning

Mode 3 is an integrated model to provide students with a platform for continual and sustainable learning. In Mode 3, EA is fully integrated into the school curriculum and this allows students to fulfill every aspect in OLE. Below are cases from Lingnan Dr. Chung Wing Kwong Memorial Secondary School and Stewards Ma Kam Ming Charitable Foundation Ma Ko Pan Memorial College, illustrating their practice of Mode 3.

6.3.1 Example 1: Lingnan Dr. Chung Wing Kwong Memorial Secondary School Elder Academy: Model, Structure and Experiences

(1) Background

Whole person development of students is the focus of the school. Echoing the school motto "Education for Service", different units and committees in schools have rich experiences in organizing social services for students. Through EA, students are encouraged to build relationships with the community, provide and promote the services for the elderly. Students can learn, grow, and establish self values through interacting with the elderly. Moreover, EA also provides the elderly with learning opportunities and promotes health and a sense of worthiness, lifelong learning and intergenerational harmony.

(2) Rationale and Goal

Whole person development has always been the school’s core work. After years of hard work and experience, different units of the school have developed extraordinary educational activities that meet different needs of the students. The implementation of EA enables students to learn through serving the elderly and participating in the community. Through skills training, organizing and participating in different activities with different roles, and getting to know different people, students’ horizons are broadened. They accumulate experience and their personal qualities and abilities enhanced. Recently, the school has integrated the Technology Student Ambassador Scheme, which is an element in a cross-form curriculum, into EA. Students can learn continuously by applying their knowledge and skills into promoting technology to the public. In addition to learning skills and knowledge, students can understand the real meaning and value of helping others, build up confidence and develop appropriate values and attitudes in relation to other people in the community. For related teaching plans please refer to Figure 26 (Outline of Whole-person Development Education 2009-2012).

(3) Course Structure and Arrangement

The school arranges activities of “Elder Academy at Lingnan” into as part of the activities under the student profile, by taking EA as a platform for students to learn and serve. Through various activities, not only are students able to learn academic knowledge, but positive personal values, attitudes and skills, such as “integrity”, “interpersonal relations”, “serving spirit”, “determination” and “sense of responsibility” can also be nurtured. Finally, personal growth and self-actualization are achieved.

OLE is added under the NSS academic structure and curriculum. Students can benefit from experiential learning in terms of knowledge advancement and personal growth (e.g. communication skills, interpersonal skills, personal qualities, etc.). Introducing EA to schools help them meet the requirements of education policies, EA can be completely integrated into the current education policies and act as an important channel for knowledge application.

</table>

- **Objectives**: To enable students to better prepare for organizing elderly related activities and know more about Gerontology.
- **No. of Sessions**: 1-2 sessions per year (Asia-Pacific Institute of Ageing Studies, Lingnan University could provide assistance to schools)
- **Format & No. of Participants**: Mainly in form of talks/workshops; suitable for all senior secondary students
- **Content**: Suitable attitudes and meaning of volunteering, ways to communicate with the elderly, general knowledge about elders’ physical and psychological health.
- **School Curriculum**: Liberal Studies, Nursing, OLE – Career-Related Experiences, Physical Development, Aesthetic Development, Ethnic Development
- **Sit-in Program**

<table>
<thead>
<tr>
<th>Activity/ Course Content</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Talks/ Workshops on Living Culture &amp; Citizenship</strong></td>
</tr>
</tbody>
</table>

- **Objectives**: To allow elders to take regular and formal lessons in classrooms for lifelong learning. Elders’ active participation in group discussions can increase the students’ involvement. School resources can be better utilized and relevant human power and resources would be spent on organizing EA activities.
- **No. of Sessions**: Other Learning Experiences sessions
- **Format & No. of Participants**: Different kinds of courses and activities
- **Content**: Though students are the major participants of the activities, the elderly could also sit in and learn courses and activities they are interested in. The program can be matched with group activities. It can benefit more elders. With these advantages, the scheme should be developed into a core course of Elder Academy.
- **School Curriculum**: Varied, depends on the activity or course

| Student Technology Ambassador Training Scheme (Appendix 5) |

- **Objectives**: To train students as “Technology Student Ambassadors”, so that they can promote technology to the community, serve and assist elders, and decrease their resistance to technology by enhancing their confidence in using it. Through the scheme, generation gaps will be narrowed.
- **No. of Sessions**: Other Learning Experiences sessions
- **Format & No. of Participants**: Cross-form learning projects
- **Content**: Form 1 to Form 4 students will learn technology at different levels. They will be provided with opportunities to organize and participate in technology promotion activities. The activity can also be included in Other Learning Experiences. Please refer to Appendix 5.
- **School Curriculum**: Liberal Studies, Information Technology, OLE – Community Service, Career-Related Experiences
6.3.2 Example 2: Stewards Ma Kam Ming Charitable Foundation Ma Ko Pan Memorial College: Service-Learning Project in Elder Academy

(1) Background

Learning core values and qualities is at the heart of the school’s Elder Academy scheme and Service-Learning. Through various service activities, students are able to experience different values of our society. In terms of social roles, students’ roles change from participants to service leaders. In terms of knowledge, they learn both the basic knowledge and through in-depth research. The scheme well demonstrates the integration of service and learning, which enables students to learn all-roundly and transfer knowledge into real life.

(2) Principles and Goals

There are 3 major goals of the activity and scheme: (1) to promote the concept of Service-Learning to secondary school students; (2) to integrate services and learning for moral education; (3) to develop a Service-Learning concept that is progressive.

The way to achieve these goals is to let students prepare for the Independent Enquiry Studies (IES) through experiences (refer to Figure 28). Students should investigate into their areas and topics they are interested in. Teachers will only guide students in their research process—setting of the topics and hypotheses, searching for information, analyzing the data, presenting the results and drawing conclusion, etc. The amount of knowledge and skills students can gain depends on their attitude, participation and contribution. If students are active and devoted, they should be able to gain in terms of knowledge, skills and attitude (Figure 29).

The depth of research depends on the project time. Students can take part in Service-Learning though the EA platform. Data can be collected through regular visits to elderly centers by observation, oral history, interviews and action research, etc. Results can be analyzed with the theories learnt. Students’ ability of transforming life experiences into knowledge would be enhanced.

(3) Course Structure and Arrangement

Integrating EA, Service-Learning and Liberal Studies into IES curriculum will lead to the adjustments of course structure and arrangement. Teachers can integrate various service targets and activities into related courses. It can be adjusted according to the form and course curriculum in order to teach students step-by-step, and ultimately help their studies. For more details, please refer to Figure 30.

(4) **Role of Teachers and Students**
As students grow in age and knowledge, the roles of teachers and students will change accordingly (please refer to Figure 31). In Form 1 and Form 2, teachers play an important role in assisting students’ learning while students are mainly the participants in the activities. When students are promoted to higher forms, their roles become more and more important. In Form 5, they play a major role while teachers are consultants of their projects. Students need to do their own research and even coordinate lower-form students’ Service-Learning programs. This is a progressive learning model, which strengthens each learning element. For course contents, please refer to Part (5) Course and Activity Contents (Figure 32).

Activity/Course Contents

Mass Event: "Pass It On"

(1) Objectives: To organize a large-scale event with the elderly, students are able to communicate and cooperate with the elderly more seamlessly and learn from each other. Moral education for students can be achieved.

(2) No. of Session(s): A one-off event

(3) Format & No. of Participants: A large-scale event/ Whole form of students

(4) Content: NGOs are responsible for designing the theme and contents of the event. Content of activities and booths should be related to ageing, such as childhood experiences of the elderly or Chinese traditional culture, etc. Activities and booths are co-organized by students and elders.

(5) School Curriculum: Liberal Studies, Computer Literacy, Home Economics, uniform groups, OLE-Career-related Experiences

Professional Development: Liberal Studies and Elder Living

(1) Objectives: To encourage students to do research on topics they are interested in the form of individual or group project. Students can know more about the elderly and thus, learn to respect and care for them.

(2) No. of Session(s): 4-6

(3) Format & No. of Participants: Individual/group project and report, whole form of students

(4) Content: 3 themes are discussed among classes:

(a) Elders’ health and sports
(b) Elders' religious belief – Christianity
(c) Chinese traditional culture – “Spiritual Consumption” Report

(5) School Curriculum: Liberal Studies, Nursing, OLE-Moral and Civic Education

Activity/Course Contents

Computer Applications and Elder Living

(1) Objectives: Students teach the elderly about what they have learned in computer classes. This not only allows students to help improve elders' understanding of computer, but also put their learned theory into practice.

(2) No. of Session(s): 5 lessons

(3) Format & No. of Participants: Students first demonstrate how to use computers in class; then 2 students will guide and teach 1 elder; 20 elders and 40 students (the ratio is 1:2)

(4) Content:

(5) School Curriculum: Computer Literacy, OLE-Moral and Civic Education, Community Service, Career-related Experiences

Independent Enquiry Studies

If schools integrate EA activities into the Liberal Studies curriculum, students can learn multi-perspective and critical thinking and other related abilities, through 3 different learning areas. Under the NSS curriculum, students need to hand in an individual IES work based on the 6 topics.

<table>

Part 7
Points to Note
(Information is provided by Lingnan Dr. Chung Wing Kwong Memorial Secondary School)

7.1 The Characteristics of Elder Academy
EA in every school should have its own characteristics and unique functions. EA can be activity-oriented, academic-oriented or focus on transferring elderly life experience and traditional culture. Schools should decide on its own EA characteristics and direction, after discussing with the co-organizers and understanding the purposes of the course curriculum as well as the backgrounds, interests and abilities of the elders. However, since elders’ abilities and potentials may not be fully uncovered, it would be better if EA can provide diversified courses and activities.

The major considerations when designing the EA scheme and OLE courses should be the schools’ missions and visions and the goals of student development. Thus, the mission and operation mode would be different in each school. Since EA scheme could be used as a platform for achieving the schools’ missions and visions and the goals of student development. Thus, the mission and role of EA as a platform for achieving the OLE requirements would be clear and effective.

7.2 Communication with Partnering Organizations
The mode of operation of schools is different from that of social welfare organizations. Therefore, at the beginning, it is essential to have close communication, in order to find the ideal way of cooperation and make an agreement or outline to avoid unnecessary misunderstanding. For example, the promotion periods of the two co-organizing units of our school are different. One is set at the start of a month. The other one is set at the end of a month. The preparation work has to be finished 2 months earlier. Thus, close communication is the only way to ensure that activities are run smoothly.

7.3 Students’ Participation
In order to encourage students to participate in EA activities, they can be required to achieve certain community-service hours during their senior secondary school years. Certain number of services should be related to elderly services. For example, at least one elderly service can be included, as a graduation requirement for students. Schools may expect every student to take part in community services and learn from these experiences. However, it is also important to consider the extra workload and burden generated to schools. Therefore, schools should not set an over-ambitious goal at the initial stage. Suitable adjustments should be made according to human resources as well as students’ performance and ability after implementing the scheme.

7.4 Human Resources
Teaching assistants or administrative staff should be the executive officers of EA, responsible for contacting related parties and other practical work. As the success of the EA scheme highly depends on the communication between different stakeholders, and executive officers play an important role.

Since OLE is a new element under the NSS academic structure and curriculum, teachers are not familiar with the operation of this mode. At the same time, the EA scheme only started in 2007. Participants may not fully understand these two schemes, which might lead to misunderstandings in the process of their integration. Some common misconceptions are shown below:

8.1 Elder Academy related activities only satisfy the area of Community Service under Other Learning Experiences
The establishment of EA aims at providing students with the opportunities to go outside the classroom and serve the community. It aims to meet the requirements of the area of Community Service. However, EA can also be a platform for fulfilling the requirements of the other OLE areas. For example, students can organize dance shows when co-organizing the "Intergenerational Fun Day" with the elders. Students’ preparation and rehearsal can fulfill the area of Aesthetic Development. Another example is attending seminars or field trips related to Hong Kong history together with the elders: students’ knowledge in the area of Moral and Civic Education could be enhanced. In other words, EA does not only satisfy requirements under Community Service, but also that of other areas.

8.2 Other Learning Experiences is unrelated to experiential learning
OLE promotes the concept of learning non-academic knowledge outside the classroom through different kinds of activities. Under this teaching and learning mode, knowledge transfer is no longer one-way. Students need to participate in various activities and learn to organize and implement activities. Teachers will observe and guide students in their self-reflection. Thus, OLE can be a platform for implementing experiential learning.

8.3 Teachers’ workload and burden will increase with the integration of school curriculum, Other Learning Experiences and Elder Academy
It is true that the initial work of achieving the same goals for the three parties may be time-consuming, due to the process of discussion, preparation and coordination. However, since they share similar missions and visions, with mutual support and integration, it will be easier for teachers to understand students’ learning process and development. At the same time, EA can serve as a platform for students to learn their academic knowledge. It also reduces the teachers’ workload in searching for practicum opportunities.
According to some research related to Service-Learning (Li, 2009), students' generic abilities such as communication skills, problem solving skills, judgment and creativity will increase after participating in Service-Learning (Chan, Ma and Fong, 2006). This study also pointed out that students' academic knowledge, skills and attitudes have been improved through this kind of training, assessed by the "Ladder of Learning" proposed by Bloom and other scholars (Bloom, 1956; Krathwohl, Bloom & Masia, 1964; Dave, 1975). This suggests that students are able to reflect on and critically analyze their learning experiences and academic knowledge through services. Afterwards, they can integrate the existing knowledge and experiences with new ones, and construct them into systematic concepts. This kind of experiential learning is an evidence for higher-level thinking and deep learning.

Students can become community service ambassadors, through the service training program which is promoted by schools, EA and OLE. Through participating in a series of progressive service activities, students and elders act as mentors and facilitators at the same time. They learn from each other and become their learning partners. Through learning, investigating, communicating and solving problems together, students and elders cooperate and complete the learning journey hand in hand. Under this structure and the context of the education reform, EA can act as a platform for students and elders to apply their knowledge make contribution to society and learn from the activity process.

In fact, school can develop other school-based OLE schemes in different modes. EA is only one of the possible ways of integrating academic knowledge and experience, enabling students to learn from various areas. Last but not least, students’ life skills and attitudes can be nurtured systematically. They can make contribution to society with their knowledge and abilities.

(Please refer to (2) Issue-based project of 5.2.2 Qualitative Assessment)

Reflection:________________________ Activity name: __________________________
Due date: __________________________

Service target:

Student's name: __________________________ Service date: __________________________

Class (Class no.) __________________________ Date: __________________________

Reflection:

1. What have you done in the service? What did you observe?

2. What have you learnt from this experience? (e.g. knowledge, skills, attitude)

3. How would you apply the new knowledge, skills or attitude mentioned above to other subjects?

4. Evaluate your performance in this activity in 50 words.

5. How would you improve yourself in future services?

6. Teacher's Feedback:
   □ The student could evaluate himself/herself seriously.
   □ The student has benefited from the Service-Learning process.
   □ The student has actively participated in the activity.
   □ The student has shown improvement throughout the Service-Learning process.
   □ The student is capable of applying what is learnt from the Service-Learning process to other subjects.

Student’s Overall Performance
□ Excellent □ Good □ Average
□ Acceptable □ Needs improvement

7. Other Suggestions

Appendix 2  Assembly Record
(Please refer to (2) Issue-based project of 5.2.2 Qualitative Assessment)

In order to enhance everyone's understanding of elders, we have invited representatives from the Office of Service-Learning, Lingnan University to speak in our two assemblies. This worksheet is to be brought along when attending the assemblies mentioned, so that you can record the speech contents, which can be useful for completing your IES.

Speaker: __________________________
Topic: __________________________
Date: __________________________ Venue: __________________________

1. Notes on the talk:

2. Your Question(s) about the Talk:

3. Students’ Feedback
   3.1 The contents of the assembly are:
       □ Very Rich □ Rich □ Average □ Acceptable
   3.2 The talk enhance my understanding of the elderly: □ Yes □ No
   3.3 I have actively participated in this assembly: □ Yes □ No
   3.4 This assembly is useful for my IES: □ Yes □ No

4. Other Suggestions
Appendix 3  Wetland Park Ambassador Scheme
(Visit www.wetlandpark.com for information of the organization)
(please refer to 6.2.2 Mode 2 Example 2: Yan Chai Hospital No.2 Secondary School)

What are Wetlands?
- Areas where water is the primary controlling factor
- Places where the land and water meet, including areas of standing water with a low tide depth that does not exceed 6 meters
- Wetlands are distributed widely around the world, housing numerous wildlife and they are important ecosystems

Wetlands in Hong Kong
- Coastal Wetlands: Freshwater and Brackish Georges
- Coastal Wetlands: Mangroves
- Coastal Wetlands: Intertidal Mudflats
- Coastal Wetlands: Coral Communities
- Coastal Wetlands: Fish Ponds and Gei-wai
- Coastal Wetlands: Rocky Shores
- Coastal Wetlands: Sandy Beaches

Wetlands in Hong Kong
- Freshwater: Streams, Flood Plains and River Valleys
- Coastal Wetlands: Gravel Beaches
- Coastal Wetlands: Sand Beaches

What are Wetlands?
- Natural
- Artificial
- Permanent
- Seasonal
- Semi-permanent
- Evaporative

Wetlands in Hong Kong
- Functions of Wetlands
  - Provide shelters
    - Wetlands provide essential habitats to a great variety of wildlife. Some animals utilize wetlands intermittently for breeding and rearing young.
  - Provide Food and Necessities
    - Wetlands provide resources with commercial values to human
    - Wetlands provide food, medicines and raw materials e.g. Rice, Taro, Job’s Tears and Water Cress
  - Provide Recreation Opportunities
    - Wetlands provide venues for recreational and educational purposes, especially for Eco-tourism
  - Ecological Cycle
    - Water Storage
    - Flood Prevention
    - Prevention of soil erosion
    - Nutrient Retention
    - Protection of shoreline and river banks
    - Mitigation and adaptation effects in relation to climate change
    - Increased land area by sedimentation
    - Filtering by removing biogeochemical nutrients and reduce suspended sediments

What are Wetlands?
- Saltwater
- Brackish
- Freshwater

Threats to Wetlands
- Coastal Construction
- Over-exploitation of water resources
- Acid Rain
- Deforestation
- Water Pollution
- Over-exploitation of water resources
- Acid Rain
- Coastal Construction
- Water Pollution
- Over-exploitation of water resources
- Acid Rain
- Deforestation
- Water Pollution
- Over-exploitation of water resources
- Acid Rain
The full name of the Ramsar Convention is "The Convention on Wetlands of International Importance, especially as Waterfowl Habitat". Adopted on 2 February 1971 in the Iranian city of Ramsar and entered into force in 1975.

Today, 163 countries have already joined the convention. 2062 wetlands are listed on the List of Ramsar wetlands of international importance, which occupy 197 million hectares in total.

Hong Kong Wetland Park

Background and Mission

- Hong Kong Wetland Park (HKWP) is the first thematic recreation facility in Asia incorporating functions of education, conservation and ecotourism using wetlands as the main theme.
- The site of the HKWP was originally intended to be an Ecological Mitigation Area (EMA) to compensate for the wetland loss due to the development of Tin Shui Wai new town.
- A feasibility study conducted afterwards had concluded that the EMA could be further developed into a world-class wetland ecotourism attraction.

HKWP Factsheet

- Wetland Reserve: 60 hectares
- Visitor Centre: about 10,000 square m²
- Total area: 61 hectares

HKWP Green Concepts

- Natural Lighting: Skylights are installed at the Atrium and toilets at the outdoors to fully utilise natural lights. The use of electricity is minimised.
- Fair-faced concrete: To reduce the use of rendered materials and to blend in the Visitor Centre with the natural environment.
- Re-used materials: Oyster shell walls were made of oyster shells collected from oyster farm in Lau Fau Shan. Bricks collected from traditional village houses were re-used to build a brick wall outside the Ticket Office. The granite materials collected from the demolished Police Headquaters in Wanchai were re-used for ground paving near Entry Plaza. Old timber fenders of piers were deployed in the freshwater marshes, to serve as perching posts for birds.
- Re-used timber: Oyster Walls, Re-used Brick Walls
- Climbing plants: Climbing plants are planted to cover external walls of the visitor center so as to minimize heat gain of the buildings.

Opposite Leaf Fig

- Location: At the entrance of Stream Walk
- It is native to Hong Kong.
- Among all the Ficus plants, only its leaves grow oppositely.
- Fruits are characterized by their bearing "figs".
- The Fig-plants depend on the wasps for their pollination.

Climbing plants

- Climbing plants are planted to cover external walls of the visitor center so as to minimize heat gain of the buildings.

Location: At the entrance of Stream Walk
Fig Wasps
- Siphonogaster nigra in the summer
- Lasioglossum karshinskyi in the autumn
- Contains many wasps which feed on nectar
- Male wasps are smaller and have longer antennae
- Female wasps are larger and have shorter antennae
- Overall, these wasps play a crucial role in pollination

Animals in the Upland Stream & Their Adaptation

Big-headed Terrapin
- With big head and long tail, capable of hiding into its shell
- Flat carapace reduces the resistance of water current
- Has the ability to adjust to different water conditions
- Omnivorous, feeds on larva, fishes, frogs and plants

Artificial Nests for Wildlife

River Habitat – Upper Stream
- Strong gradient
- High water velocity
- Less food in water
- Suitable for intolerant species
- With the high gradient, small rocks are easily washed off the stream bed
- Formation of waterfall
- Water, the bacterium mechanism of Takahashi’s ‘tropic fall’ for light that was sent to the old bed
- Root and stem could serve as Chinese medicine to treat circulation

Location: Second Pavilion of Stream Walk

Aquatic Plants

Common Rush
- Perennial emergent plant found at muddy fields, ponds, rivers, swamps, meadows
- The plant has nodules at the stem to support the root system
- Route and stem could serve as Chinese medicine to treat circulation

Location: Middle Pavilion, Stream Walk

Function of the Weir
- Water levels are maintained at specific levels by controlling weirs and pumps
- Water flow is regulated by changing the discharge volume
- HKW has a reservoir for storing the water supply, meeting the needs of rivers, aqueducts, and domestic and industrial consumption

Location: the water gate

Food – Paddy
- Annual plant which is very water demanding
- Rice we eat is rice grains without hulls
- Rice, a staple food for Chinese and South-east Asian

Location: Wetlands at work

Food – Taro
- Short-lived leaves
- Grows in placques with plenty of water
- The stems are long, slightly thick but round, after cooking it can be served as regular
- Water proof leaves to reduce rotting

Location: Wetlands at work

A Handbook for Using Elder Academy as a Platform of Other Learning Experiences
Appendix 4  Basic Gerontology Workshop
(Please refer to 6.3.1 Mode 3 Example 1: The Integration of Elder Academy and the Basic Gerontology Course of Lingnan Dr. Chung Wing Kwong Memorial Secondary School)

Gerontology Workshop

Gerontology is....
- An investigation of ageing process
- An investigation of ageing through physical, psychological and social aspects.
- Gerontologists include scholars, researchers and professionals from different fields.

Do you know the Ageing Process?
- Ageing in terms of
  - Age
  - Physic
  - Psychology
  - Society

They are Interrelated!!

Today’s content
- Introduction to Gerontology
- What is Gerontology? Why should we learn about Gerontology?
- Ageing Population in Hong Kong
- Reasons for Ageing Population
- Misconceptions about the elderly
- Characteristics of elders in the present and future

Ageing Population in Hong Kong

What is “Ageing Society”?
"A Society with more than 7% of population aged over 65 OR more than 10% of population aged over 60."

Reasons for Ageing Population
- Low birth rate
- Low death rate
- Longer life expectancy
- Ageing of the baby boom after 2nd World War

Characteristics of the Elderly in Future
- People in post-war baby boom grow old
- Elderly growth
- Longer life expectancy of Hong Kong population
- Higher education level
- Changes in the form of diseases
- Change of family's role

Misconceptions about the elderly
- Weak and fragile
- Low mobility, dependent
- Bad memory --> Dementia
- Isolated and outdated
- Unable to contribute to the society
- Lost of learning ability
- Stubborn

Categories of the Elderly
- Young-old
- Old-old
- Oldest-old
- Centenarian

Characteristics of Hong Kong Population Structure

Changes in Psychological Aspect

Changes in Physical Aspect
- loss of appetite
- dizziness
- death of his wife
- unable to support and care

Examples

Old Man Depression
- Lost of appetite
- Dizziness
- Widower
- Support and care

Happiness

Depression

Fracture

Longer life expectancy of Hong Kong population

Low death rate

People in post-war baby boom grow old

Around 28% of elders had obtained junior secondary or higher education levels (2005)

Longer life expectancy of Hong Kong population

65 years old or above

75 years old or above

Everybody gets old…

Understand the “normal” ageing process

Health is…

- Physical
- Psychological
- Social welfare/social life (spiritual)

Well-being

World Health Organization

Physical Change of the elders

1) Immune System
   - Chronic illnesses, e.g. Rheumatoid arthritis

2) Integumentary System
   - Winkles, freckles

3) Nervous System
   - Weakened cognitive ability, sleeping problems

4) Circulatory System
   - Function of heart and veins are weakened

5) Bones & Muscles
   - Become shorter

6) Digestive System
   - Degeneration of stomach & esophagus

7) Respiratory System
   - Lungs' function deteriorates

8) Endocrine System
   - Hormones secretion slows down

9) Sensory System
   - Five Senses: seeing, hearing, tasting, touching, smelling

Let’s Compete!

Common Illnesses of the elderly

- Heart disease, stroke, diabetes, arthritis, high blood pressure, dementia, Parkinson’s Disease, depression, etc.

Cataract

Dementia vs Parkinson’s Disease

Dementia

- A disease originated from the brain. Patients will have problems in memory, orientation, cognitive abilities and emotions. Their daily life, career and roles in the community will be disturbed.

- 10 signs of Dementia
  1. Lost of short-term memory, affecting work ability
  2. Making troubles in dealing with familiar things
  3. Confusing with time, place and people
  4. Changes of emotions or behavior
  5. Change in character
  6. Becoming passive
  7. Making troubles with abstract concepts

Parkinson’s Disease

- Disease induced by degeneration of the brain cells
- Slow motion, especially when one start moving and change direction
- Uncontrollable shaking limbs
- Incoordination of actions but conscious

Does ageing mean suffering from diseases?
Factors Affecting Elders’ Health

Health is determined by:
- Lifestyle (50%)
- Genes (15%)
- Social Factors (10%)
- Medical Care (8%)
- Climate (7%)

Build up healthy habits since YOUNG!

Such as:
- do more exercises
- balanced diet
- don’t smoke, drink or take drugs
- sleep and get up early

Ageing =/= Illness

Diseases can be prevented with healthy lifestyles

Psychological change of Elders

Retirement
- Change in role
- Expectations

Family
- Couple Relationships
- Family Relationships
- “Empty Nest”

Self
- Lack of confidence
- Lack of interest

Social
- Friends
- Neighborhood

Discussions

Questions
- What impacts do the ageing population in Hong Kong bring about?
- Where did the negative image of elders come from?
- How to improve their image?
- The change of Hong Kong people’s approaches to life after retirement?
- How to improve elders’ health?
- How should the elderly adapt to the change in retirement lives?

Content
- Introduction to ageing population
- What is communication?
- Basic communication skills with the elderly
- Communication skills in special situations
- Principles of communication with elders
- The art of communication with elders
- Discussion & Sharing by the elderly

Ageing Population in Hong Kong
- Total population: 6,935,900
  - Aged under 15: 14.5%
  - Aged 15-64: 73.4%
  - Aged 65+: 12.1%
- Over 24% of the population will be aged above 65 in 2031
  (Census and Statistics Department, HKSAR, 2005)
- It is predicted that in 2031, 24.3% of the population, which is 1 out of 4 persons, would be elders.
  - From 2002 to 2016, the elderly population grows steadily. While in 2016, people born in post-war period would be aged and elderly population would grow rapidly. It is predicted that during the period 2030-2041 elderly population will reach the peak.

Categories of the Elderly
- Young-old
- Old-old
- Oldest-old

Communication Obstacles
1) Communication suspension
2) Personal and subjective preferences, experiences
3) Living environment

Communication with the Elderly
Mr. David Ho, Project Officer
Asia-Pacific Institute of Ageing Studies
Lingnan University

Do you have any elder in your family? When did you chat with them last time? How long did you chat? What did you chat? Did you chat with other elders? Is there any difference from chatting with peers?
When you communicate with the elderly:

- Seldom talk, so without conflict
- Have nothing to talk to grandparents when you visit them
- Surf on the web when grandma calls
- Give up after repeating a question a few times loudly but still get irrelevant answer
- Feel it is nagging when elders exhort repeatedly
- Elders insist their own opinions and do not accept new ideas despite of repeated explanation: Unable to convince elders to change
- Feel annoyed when elders always talk about the past…

Communication skills in special situations

**Physical**
- Aural degeneration
- Visual degeneration
- Geriatric diseases (e.g. dementia, Stroke)

**Psychological**
- Differences in opinions
- Emotion
- Prejudice

**Environmental**
- Communication should be two ways
- In addition to understand, it is also important to know how to express
- Change? Effort by young and old generations

Basic Communication Skills

- Listening and Expressing
- Verbal communication skills
- Language use
- Non-verbal communication skills

Communication skills in special situation—Physical

Don’ts

- Statements that the elderly dislike
- Imperative
- Educative
- Argumentative
- Criticizing
- Escaping
- Questioning

Communication skills in special situation—Psychological

- Disturbance in environment
- Privacy level
- Time sufficiency

Communication skills in special situation—Environmental

Principles of Communication with the Elderly

- Be respectful, friendly and sincere; listen and answer wholeheartedly
- Be patient and take your time, avoid explaining in short time
- Be cautious when analyzing what elders say, do not judge before they finish saying
- Avoid arguing with elders because they might refuse to speak and become self-defensive, subsequently destroying the relationships
- Choose a quiet and comfortable environment when communicating with the elderly

Elder Sharing

**Mr. David Cheung**

- F.3 graduate
- 74 years old
- Vice president in the Organizing committee of Elder Academy at Lingnan

Discussion

You are visiting elders at an elderly home, but the elders excitedly and repeatedly talk about the past with you. You want to switch topic, what would you do?

Conclusion

To communicate with elders, you need:

- Ears
  - Listen carefully
  - Pay attention to non-verbal expressions and movements
- Heart
  - Be sincere
  - Be humble
  - Build up relationship
- Eyes
  - Look at the elders
  - Pay attention to non-verbal expressions and movements
- Mouth
  - Speak steadily
  - Speak precisely
  - Question and answer
  - Confirm the elder’s meaning by repeating
  - Ask frankly
  - Explain with examples
- Hands
  - Appropriate body contact
  - Hand movement
Appendix 5: Training Scheme for Student Technology Ambassadors

(Please refer to 6.3.1 Mode 3 Example 1: Lingnan Dr. Chung Wing Kwong Memorial Secondary School Elder Academy: Mode, Structure and Experiences)

The nature of this scheme is cross-subject and cross-form. Students act as tutors and teach elders about the technological knowledge after taking a course. Through this, students' knowledge can be applied when they serve the community. Although the scheme mainly focuses on information technology, students can still apply the knowledge learned from other subjects. Therefore, when designing the scheme and the course, schools can consider linking it to other subjects, so that it can be more comprehensive and solid with both cross-grade and cross-subject approaches.

- Technology promotions
- Teaching Assistants
- Technology Student Ambassador
- Senior Technology Student Ambassador
- Management
- In charge of technology promotion activities

Regular Lessons (Technology Student Ambassadors)

- Targets: Form 1 to Form 4
- No. of Sessions: 2-6 lessons
- Course Contents: Technology & Design, Interpersonal Relationship & Communication Skills
- Objectives:
  - To understand technology in different levels and aspects; nurturing creativity and problem-solving skills
  - To understand roles and functions of student technology ambassadors
- School Curriculum:
  - Junior Secondary: Technology, Computer Literacy, Life Education
  - Senior Secondary: Information & Communications Technology, Liberal Studies, OLE

Technology Promotion Activities

- No. of Sessions: A one-off or continuous course
- Types of Activity: Technology Workshops, Information Technology Application, Door-to-Door Supporting Service, Model Competition, etc.
- Contents: Making Electrical Doorbell or Alarm & robots or other models, Basic Computer Repairing Skills, Basic Computer Operations, Usage of Internet, Facebook & Electrical Products, Installation of Hardware & Software, Understanding the sales of digital products

12.1 Lingnan Dr. Chung Wing Kwong Memorial Secondary School

Lingnan Dr. Chung Wing Kwong Memorial Secondary School is a subsidized full-time secondary school founded in 1968 under the Lingnan Education Organization. There are 28 classes in total, 5 classes in each form from Form 1 to 4, 4 classes in Form 5, and 2 classes each in Form 6 and 7. There are around 1000 students and 63 teachers in total. Among the teachers, 58 of them have a bachelor's degree, 26 teachers own a master's degree while 1 of them even has a doctorate.

The school has always inherited the traditions of the Lingnan Education Organization, providing education based on Christian spirit. Students are not only equipped with the knowledge and skills, but also nurtured with all-round development in personal qualities. "Learning to serve the community” is the motto of the school.

Education institutions should go through reviews from time to time in order to cope with the social changes. To act in accordance with the education reform, teachers of the school act as students' mentors in order to enhance the quality of teaching and counseling, and at the same time, facilitate students’ learning and development through OLE activities. In the coming few years, the school will emphasize three major directions. The first one is to create a learning and caring culture in school. Under this atmosphere, it is hoped that students will work hard, play hard and achieve the aims of whole-person development eventually. Secondly, we aim at recording students’ learning and growth systematically. Meanwhile, students will be encouraged to have multi-dimensionally intellectual development based on their own abilities and personalities. Lastly, as a school that holds a Guinness World Record, we would like to promote the technology education in Hong Kong society, in order to fulfill our school motto and make contribution to society. We will work hard to achieve these three goals and help our students to develop to the full extent at the same time.
12.2 Lingnan Hang Yee Memorial Secondary School

Lingnan Hang Yee Memorial Secondary School was founded in 1991. We believe that love and care are the best support for learning, growth, and is the foundation of success. Established for 19 years, our school does not aim at teaching “elite students”, but we try our best to facilitate the development and achievement of every single student, as we believe that everyone has his/her potential. All of them can be the honor of the school, their family, the community and even the country.

There is a school policy of having the same class teacher for a student’s three-year junior secondary study, as well as in their senior secondary study. Class teachers can be the trainers and counselors at the same time. Class teachers can therefore use different strategies to equip students with the ability to deal with difficulties and negative emotions, based on the needs of each class. One of the strategies is to encourage a whole class of students and teachers to participate in community services. This can strengthen students’ sense of belonging and teamwork spirit. Through this platform, students’ self-confidence and responsibility will be enhanced and teachers and students can learn and grow up together.

We believe that various learning experiences can be beneficial to students in terms of both personal growth and academic learning. Thus, we have provided many activities related to different learning areas since the establishment of the school. In 2004, we even started a service scheme, which encouraged each student to participate in at least one community service project. In the academic year of 2008-09, 78% of our students participated in community services and served for over 10000 hours in total. In other words, each student served 14.3 hours on average.

Undoubtedly, the establishment of EA has provided more learning opportunities for students. In 2008-09, 79% of our students participated in EA services for a total of 5,269.5 hours. Students could serve the elders without leaving the campus. Moreover, since elders had lessons and participated in school activities frequently, the relationships between students and elders have been improved. With this bonding, students are not only loved, but they also learn to love others and take up responsibilities. Also, by learning from the elders, students could reflect how to enjoy a meaningful live in the future.

12.3 Stewards Ma Kam Ming Charitable Foundation Ma Ko Pan Memorial College

The school, established in September 1, 1997, is a Government Subsidized Co-educational Grammar School operated by Stewards Limited. The establishment fund was donated by Ma Kam Ming Charitable Foundation. Currently, there are 29 classes in total, with 81 teachers, 3 laboratory technicians, 5 teaching assistants, and 4 school-based social workers. There are 15 full-time and part-time clerical staff and 11 janitorial staff. Our student body consists of 1,002 students.

The school motto “Be the Salt and the Light of the world” is based on the Book of Matthew of the New Testament, Chapter 5 Verses 13-15: “You are the salt of the earth. But if the salt loses its saltiness, how can it be made salty again? It is no longer good for anything, except to be thrown out and trampled by men. You are the light of the world. A city on a hill cannot be hidden. Neither do people light a lamp and put it under a bowl. Instead they put it on its stand, and it gives light to everyone in the house.”

The school believes that each and every one of us is the work of God, made in His image, with God-given talents and potentials. People must each take up their part in fulfilling God’s plan. As such, we should have mutual respect and support in creating a world that would be pleasing to God.

With Christian beliefs as our foundation, the school dedicate ourselves to providing whole-person education for students and fostering their growth in spiritual, moral, intellectual, physical, social and aesthetic aspects. We are also committed to developing students’ potential to the fullest and nurturing their critical thinking and lifelong learning attitude. We endeavor to guide students to pursue the truth, goodness, mercy and reputable characters, and to serve God and others wholeheartedly.
12.4 Yan Chai Hospital No.2 Secondary School

Yan Chai Hospital No.2 Secondary School was founded in 1987 as the second secondary school of the Yan Chai Hospital, which is a charity. Over the past 20 years, the school has established a monitoring system to increase transparency and facilitate the school’s development. Thanks to the hard work of all colleagues and students, the school was awarded Merit in The Outstanding School Awards under the Quality Education Fund (2001), 1st runner up of the Green Schools Award and Silver in the Hong Kong Healthy School Award Scheme (2004), Gold in the Hong Kong Healthy School Award Scheme (2006), Hong Kong Arts Development Awards - Award for Arts Education (2007) and Gold in Sustainable Development School Award Program (2006).

In 2004, the Education Bureau suggested an idea of having Chinese, English, Mathematics and Liberal Studies as core subjects in the New Senior Secondary curriculum, while using OLE as a platform for students’ whole-person development. The school agrees with the direction of the reform and believes that as educators, schools should provide quality education according to the changes in society. In other words, we try to nurture our students to be creative, self-motivated, and able to think critically, communicate well with others and care about society.

Yan Chai Hospital No.2 Secondary School emphasizes whole-person development of students. Therefore, its syllabus is always up to date. Before the government announced the NSS curriculum, the school had already required all students to take part in community services since 2003. In 2007, all students have their own learning profiles in order to get ready for the implementation of the new curriculum. Thus, students can experience more and engage in high-quality studies within the education system.

In 2009-10, the school suggested that apart from academic development, it is also important to achieve the school motto of “Serving the Community in the Spirit of Benevolence” and fulfill the public’s expectation of whole-person development. Students’ self-confidence and ability to engage in lifelong learning would be enhanced in this way. The school has therefore set the second round of three-year goals (2009-12), aiming to 1) improve academic results; 2) create a positive school image; 3) create a reading culture on campus. The school believes that through achieving the above goals, students can become knowledgeable talents with appropriate values and perseverance, and able to succeed in the knowledge-based society and contribute to the community.
